performance is not necessarily a guide to the future. Unit trust prices are calculated on a net asset value basis, which is the total value of all assets in the portfolio including any income accrual and less any permissible deductions from the portfolio. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. A schedule of fees and charges and maximum commissions is available on request from Allan Gray Unit Trust Management Limited. Commission and incentives may be paid and if so, would be included in the overall costs. A feeder fund portfolio is a portfolio that, apart from assets in a liquid form, consists solely of units in a single portfolio of a collective investment scheme. Forward prioring is used. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. All of the unit trusts may be capped at any time in order for them to be managed in accordance with their mandates. Member of the ACI.
