

Fund managers: Ian Liddle
(The underlying Orbis Global Equity Fund is managed by Orbis)

Inception date: 1 April 2005

Class: A

Fund description

The Fund is a feeder fund and invests only in the Orbis Global Equity Fund, managed by Allan Gray's offshore investment partner, Orbis Investment Management Limited. The Orbis Global Equity Fund invests in shares listed on stock markets around the world and aims to be fully invested at all times. Returns are likely to be volatile, especially over short- and medium-term periods. Although the Fund is fully invested outside South Africa, the units in the Fund are priced and traded daily in rands.

ASISA unit trust category: Foreign - Equity - General

Fund objective and benchmark

The Fund aims to outperform global stock markets over the long term, without taking on greater risk. Its benchmark is the FTSE World Index, including income.

How we aim to achieve the Fund's objective

The Fund invests only in the Orbis Global Equity Fund. The Orbis Global Equity Fund is managed to remain fully invested in selected global equities. Orbis uses in-house research to identify companies around the world whose shares can be purchased for less than Orbis' assessment of their long-term intrinsic value. This long-term perspective enables Orbis to buy shares which are shunned by the stock market because of their unexciting or poor short-term prospects, but which are relatively attractively priced if one looks to the long term. This is the same approach as that used by Allan Gray to invest in South African equities, except that Orbis is able to choose from many more shares, listed internationally.

Suitable for those investors who

- Seek exposure to diversified international equities to provide long-term capital growth
- Wish to invest in international assets without having to personally expatriate rands
- Are comfortable with global stock market and currency fluctuation and risk of capital loss
- Typically have an investment horizon of more than five years
- Wish to use the Fund as a fully invested global equity 'building block' in a diversified multi-asset class portfolio

Minimum investment amounts

Minimum lump sum per investor account: R20 000

Additional lump sum: R500

Minimum debit order*: R500

*Only available to South African residents.

Annual management fee

Allan Gray is paid a marketing and distribution fee by Orbis and charges no further fees. The underlying Orbis funds have their own fee structures, these can be found at www.orbis.com.

1. FTSE World Index including income (Source: Bloomberg), performance as calculated by Allan Gray as at 31 July 2012.

2. This is based on the latest numbers published by I-Net Bridge as at 30 June 2012.

3. Maximum percentage decline over any period. The maximum rand drawdown occurred from 6 June 2008 to 10 March 2009 and maximum benchmark drawdown occurred from 5 June 2008 to 6 March 2009. Drawdown is calculated on the total return of the Fund/benchmark (i.e. including income).

4. The percentage of calendar months in which the Fund produced a positive monthly return since inception.

5. The standard deviation of the Fund's monthly return. This is a measure of how much an investment's return varies from its average over time.

Total expense ratio (TER)

The TER for the year ending 30 June 2012 is 1.97% and included in this is a performance fee of 0.30% and trading costs of 0.12%. The annual management fee rate charged by Orbis in the underlying fund for the three months ending 31 July 2012 was 1.17% (annualised). These figures are inclusive of VAT, where applicable. Fund returns are quoted after deduction of costs incurred within the Fund so the TER should not be deducted from Fund returns (refer to page 2 for further information).

Fund manager quarterly commentary as at 30 June 2012

Investors are often classified as having either a growth or value style, a distinction Orbis has found difficult to apply to itself. While, like Allan Gray, Orbis always tries to own undervalued companies, a key part of any valuation is expected growth in earnings per share—the higher the growth rate, the better. Orbis analysts research individual companies to determine whether the value of a business significantly exceeds its market price, regardless of where that company fits on the growth spectrum. While the Orbis Global Equity Fund can at times have greater exposure to so-called ‘value’ or ‘growth’ names, this is a reflection of the opportunities available rather than an inherent stock selection bias.

Still, it can be instructive to consider the Fund’s positioning and its effect on performance. Of late Orbis has found an increasing number of opportunities among depressed shares that have lagged the market significantly. The resultant positioning, however, has hurt the Fund’s relative performance as the laggards have continued to lag. At times the performance of individual shares will be sufficient to overcome such a headwind, but that has not been the case recently: since the start of 2010, your Fund has underperformed the FTSE World Index by an annualised 4%. Yet Orbis believes the current portfolio is positioned well for future outperformance. Today, the relative valuation of global laggards versus the FTSE World Index is at levels last seen during the height of the technology bubble and the peak of the financial crisis in 2008-2009. In both of those periods, laggards went on to outperform significantly.

Your Fund’s positioning in favour of laggards has not been extreme, but a number of recent additions do come from the laggard club, including semiconductor manufacturer Micron Technology. After a successful investment in Micron a few years earlier, in late 2011 Orbis began rebuilding the position after the share price dropped and Dynamic Random Access Memory (DRAM) prices fell to levels that would force weaker players out of business, allowing for consolidation and a better future for the surviving companies.

Micron has survived and is actively consolidating the industry as the buyer of fallen giant Elpida. With this purchase, Micron has picked up state-of-the-art manufacturing capacity at cents on the dollar, while raising its market share to 24%, joining Hynix and Samsung in dominating a consolidated market. Hopefully, this will result in more rational pricing and higher profits.

In addition to this tailwind, Micron also offers a significant margin of safety, trading for less than the value of its tangible assets. This is far below the company’s historical average, and may provide a re-rating opportunity

should DRAM market conditions improve. Orbis believes Micron is much more attractive than the wider market at current prices, and like many currently attractive shares, Micron has been a laggard. If it continues to lag, your Fund’s short-term performance will suffer, but over the long term, Orbis believes this and other investments will generate pleasing returns.

Disclaimer

A feeder fund is a unit trust fund that, apart from assets in liquid form, consists solely of units in a single portfolio of a collective investment scheme. The Fund may be closed to new investments at any time in order to be managed in accordance with its mandate. Permissible deductions may include management fees, brokerage, STT, auditor’s fees, bank charges and trustee fees. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. The Fund may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Allan Gray Unit Trust Management (RF) Proprietary Limited (“the Company”) is a member of the Association for Savings & Investment SA (ASISA). Allan Gray Proprietary Limited, an authorised financial services provider, is the appointed investment manager of the Company. The Company is incorporated and registered under the laws of South Africa and is supervised by the Financial Services Board. The Company has been approved by the Regulatory Authority of Botswana to market its unit trusts in Botswana, however it is not supervised or licensed in Botswana.

Unit price

Unit trust prices are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any permissible deductions from the portfolio divided by the number of units in issue. Forward pricing is used and Fund valuations take place at approximately 16:00 each business day. Purchase and redemption requests must be received by the manager by 14:00 each business day to receive that day’s price. Fluctuations and movements in exchange rates may also cause the value of underlying international investments to go up or down.

Fees

A schedule of fees, charges and maximum commissions is available on request from the manager. Commission and incentives may be paid and if so, would be included in the overall costs.

TER

*TERs are shown for class A units only

The Total Expense Ratio (TER) is the percentage of the fund’s average assets under management that has been used to pay the fund’s operating expenses over the past year. The TER includes the annual management fees that have been charged (both the fee at benchmark and any performance component charged), trading costs (including brokerage, STT, STRATE and insider trading levy), VAT and other expenses. Since unit trust expenses vary, the current TER cannot be used as an indication of future TERs. All Allan Gray performance figures are quoted after the deduction of costs incurred within the Fund so the TER is not a new cost. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. Instead, when investing, the investment objective of the Fund should be aligned with the investor’s objective and compared against the performance of the Fund. TERs should then be used to evaluate whether the Fund performance offers value for money.

Performance

Collective Investment Schemes in Securities (unit trusts) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to the future. Performance figures are from Allan Gray Proprietary Limited and are for lump sum investments with income distributions reinvested.
