Minimum monthly: None
Subsequent lump sums: R2 500
Income distribution: Annually
Status of the Fund: Currently Open

Annual management fee: No fee. The underlying funds, however have their own fee structure.

Total Expense Ratio*

Total Expense Ratio	Included in TER	
	Trading Costs	Performance Component
1.89%	0.12%	0.42%

*A Total Expense Ratio (TER) is a measure of a portfolio's assets that are relinquished as operating expenses (incl. VAT). It is expressed as a percentage of the average value of the portfolio, calculated for the year to the end of December 2006. Included in the TER is the proportion of costs that are incurred in the performance component and trading costs. These are disclosed separately as percentages of the net asset value.

Commentary

Over the last year the Fund has returned 12.0% in dollars versus its benchmark of 16.2%. The Global Fund of Funds invests in a balanced portfolio of Orbis equity and absolute return funds. The Fund remains overweight Asian and Japanese equities, where it continues to find opportunities to invest in over-capitalised companies that are attractively priced in relation to their book values. While Japan has underperformed the USA over the last year, we remain confident of the long-term opportunities the Fund's Japanese shares present in absolute terms and versus the equity benchmark. The Fund has a relatively conservative 60% exposure to equities with the balance in absolute return funds.

Collective Investment Schemes in Securities (unit trusts) are generally medium- to long-term investments. The value of participatory interests (units) may go down as well as up and past performance is not necessarily a guide to the future. Unit trust prices are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accrual and less any permissible deductions from the portfolio divided by the number of units in issue. Declaration of income accruals are annually. Fund valuations take place at approximately 16h00 each business day. Purchase and repurchase requests may be received by the manager by 14h00 each business day. Performance figures from Allan Gray Limited (GIPS compliant) are for lump sum investments using net asset value prices with income distributions reinvested. Permissible deductions may include management fees, brokerage, MST, auditor's fees, bank charges, trustee fees and RSC levies. The Fund may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees and charges and maximum commissions is available on request from Allan Gray Unit Trust Management Limited. Commission and incentives may be paid and if so, would be included in the overall costs. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. Forward pricing is used. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. A Fund of Funds unit trust only invests in other unit trusts, which levy their own charges, which could result in a higher fee structure for these portfolios. This Fund may be capped at any time in order to be managed in accordance with the mandate. Member of the ACI. Total Expense Ratio (TER): When investing, costs are only a part of an investment decision. The investment objective of the Fund should be compared with the investor's objective and then the performance of the investment and whether it represents value for money should be evaluated as part of the financial planning process. All Allan Gray performance figures and values are quoted after the deduction of costs incurred within the Fund so the TER is not a new cost. A high TER will not necessarily imply a poor return nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's.
