

ALLAN GRAY-ORBIS GLOBAL FUND OF FUNDS

Fund manager: Andrew Lapping. (The underlying Orbis funds are managed by Orbis.) **Inception date:** 3 February 2004

Fund description and summary of investment policy

The Fund invests in a mix of equity, absolute return and multi-asset class funds managed by Allan Gray's offshore investment partner, Orbis Investment Management Limited. The typical net equity exposure of the Fund is between 40% and 75%. The Orbis Optimal SA funds included in the Fund use exchange-traded derivative contracts on stock market indices to reduce net equity exposure. In these funds, the market exposure of equity portfolios is effectively replaced with cash-like exposure, plus or minus Orbis' skills in delivering returns above or below the market. Returns are likely to be less volatile than those of an international equity-only fund. Although the Fund is fully invested outside South Africa, the units in the Fund are priced and traded daily in rands.

ASISA unit trust category: Global – Multi Asset – High Equity

Fund objective and benchmark

The Fund aims to create long-term wealth for investors without exceeding a maximum net equity exposure limit of 75%. It aims to outperform the average return of funds subject to similar constraints without taking on more than their average risk. The Fund's benchmark is a portfolio made up 60% by the FTSE World Index, including income, and 40% the JP Morgan Global Government Bond index.

How we aim to achieve the Fund's objective

The Fund invests in equity, absolute return and multi-asset class funds managed by our offshore investment partner, Orbis Investment Management Limited. Within all of the underlying funds, Orbis uses in-house research to identify companies around the world whose shares can be purchased for less than Orbis' assessment of their long-term intrinsic value. This long-term perspective enables them to buy shares which are shunned by the stock market because of their unexciting or poor short-term prospects, but which are relatively attractively priced if one looks to the long term. This is the same approach as that used by Allan Gray to invest in South African equities, except that Orbis is able to choose from many more shares, listed internationally.

Depending on our assessment of the potential returns on global stock markets relative to their risk of capital loss, we actively manage the Fund's net exposure to equities by varying its exposure to the underlying Orbis funds. By varying the Fund's overall exposure to equities and also its geographic exposure, through selecting between the Orbis regional equity funds, we seek to enhance the Fund's long-term returns and to manage its risk. The Fund's currency exposure is actively managed both within the underlying Orbis funds and through our selection of Orbis funds.

Suitable for those investors who

- Seek long-term capital growth from a diversified international equity portfolio without being fully exposed to stock market risk
- Wish to invest in international assets without having to personally expatriate rands
- Are comfortable with taking on some risk of market and currency fluctuation and potential capital loss, but typically less than that of an equity fund
- Typically have an investment horizon of more than five years
- Wish to use the Fund as a foreign medium equity 'building block' in a diversified multi-asset class portfolio

Minimum investment amounts

Minimum lump sum per investor account	R20 000
Additional lump sum	R500
Minimum debit order*	R500

*Only available to investors with a South African bank account.

1. 60% of the FTSE World Index including income and 40% of the JP Morgan Global Government Bond Index (source: Bloomberg), performance as calculated by Allan Gray as at 30 April 2017.

2. This is based on the latest numbers published by INET BFA as at 31 March 2017.

3. Maximum percentage decline over any period. The maximum rand drawdown occurred from 23 October 2008 to 14 October 2010 and maximum benchmark drawdown occurred from 23 October 2008 to 30 June 2009. Drawdown is calculated on the total return of the Fund/benchmark (i.e. including income).

4. The percentage of calendar months in which the Fund produced a positive monthly return since inception.

5. The standard deviation of the Fund's monthly return. This is a measure of how much an investment's return varies from its average over time.

6. These are the highest or lowest consecutive 12-month returns since inception. This is a measure of how much the Fund and the benchmark returns have varied per rolling 12-month period. The Fund's highest annual return occurred during the 12 months ended 31 December 2013 and the benchmark's occurred during the 12 months ended 31 December 2013. The Fund's lowest annual return occurred during the 12 months ended 31 October 2010 and the benchmark's occurred during the 12 months ended 30 June 2009. All rolling 12-month figures for the Fund and the benchmark are available from our Client Service Centre on request.

ALLAN GRAY-ORBIS GLOBAL FUND OF FUNDS

Meeting the Fund objective

Since inception and over the latest 10 and five-year periods, the Fund has outperformed the benchmark and its returns have exceeded CPI inflation by a significant margin. The Fund experiences periods of underperformance in pursuit of its objective of creating long-term wealth for investors, without taking on greater risk of loss than similar funds in the Global - Multi Asset - High Equity sector.

Income distributions for the last 12 months

To the extent that income earned in the form of dividends and interest exceeds expenses in the Fund, the Fund will distribute any surplus annually.	31 Dec 2016
Cents per unit	0.1949

Annual management fee

Allan Gray does not charge an annual management fee but is paid a marketing and distribution fee by Orbis.

Orbis charges annual management fees within the underlying Orbis funds. Each fund's fee rate is calculated based on the fund's performance relative to its own benchmark. For more information please refer to the respective Orbis Funds' factsheets, which can be found at www.allangray.co.za.

Total expense ratio (TER) and Transaction costs

The annual management fees charged by Orbis are included in the TER. The TER is a measure of the actual expenses incurred by the Fund over a 3-year period (annualised). Since Fund returns are quoted after deduction of these expenses, the TER should not be deducted from the published returns (refer to page 4 for further information). Transaction costs are disclosed separately.

TER and Transaction costs breakdown for the 3-year period ending 31 March 2017	%
Total expense ratio	1.83
Fee for benchmark performance	1.34
Performance fees	0.42
Other costs excluding transaction costs	0.07
VAT	0.00
Transaction costs (including VAT)	0.15
Total investment charge	1.98

Fund manager quarterly commentary as at 31 March 2017

Sixty percent equities and forty percent bonds – the ‘60/40’ fund – has become such a standard for ‘moderate risk’ that any other allocation raises eyebrows. The idea behind the 60/40 goes back to the 1950s, when economists like Harry Markowitz and William Sharpe proposed that ‘imperfect correlation’ between equities and bonds meant that combining the two would reduce risk. When equities went down, bonds would go up, so the stocks could provide long-term upside while the bonds protected against a market crash.

That theory remains popular, but the facts have changed. Since the Global Financial Crisis, central banks have tried to prop up growth by printing money and using it to buy bonds from banks. The hope is that banks will use that cash to lend more freely and in doing so support growth. Printing money often fails to spur real economic growth, but it rarely fails to distort asset prices. With central banks buying up bonds, bond prices increase, which lowers yields and forces income-dependent investors into other assets in search of returns. The result is that investors have pushed equity markets up at the same time that bond prices were pushed to record highs. In other words, the financial wizards have broken the historically negative correlation between bonds and equities. They appear to have (at least temporarily) broken the old method of risk protection along with it. Bonds and equities have run up together, and they could crash together.

Consider the Orbis SICAV Global Balanced Fund, which represents 74% of your portfolio. Orbis does not believe that filling 40% of the Fund with overvalued sovereign bonds is an effective way to protect clients from risk today. Looking closer at the equity market, the picture looks even more unlike the past. Stock markets are entering the ninth year of a bull market and look expensive. At the top of an equity market cycle, it is typically the ‘cyclical’ stocks that look overvalued. This time, however, it is ‘defensive’ names that have driven the market upwards.

This makes sense: central banks suppressed the prospective returns on bonds by bidding up their prices, so investors who had previously held bonds were forced into equities. As reluctant equity investors, they went for the most bond-like stocks they could find, at a time when other equity investors lacked confidence in growth. Amid continued uncertainty, cyclicals like banks, industrials, and energy remained cheap. So not only do we have a situation where bond and equity markets have run together – we also have a situation where the market, particularly the US, looks expensive and yet cyclicals look attractive.

As a result, the Fund’s asset allocation may look counterintuitive. Orbis is worried about rich stock market valuations, but most of the Fund is invested in selected equities. Orbis is particularly worried about valuations in the US, but its bottom-up research process has led to overweight positions in selected energy, bank and healthcare shares that should perform well if US growth accelerates. Orbis seeks protection from a downswing in equities, but the Fund has limited fixed income exposure – all of which is also geared to accelerating growth.

With 86.6% of the Fund in selected stocks, it is certainly different from the 60/40 standard. How do we reduce risk? The solution is to employ equity hedging, bringing the Fund’s stock market exposure to 62.6% – not far above the weight of equities in the benchmark, but achieved very differently. As a result of this hedging, part of the Fund is not exposed to either stock markets or to bonds. Instead, this portion should capture the difference in returns between these selected equities and the stock market indices used to hedge.

Through hedging, exposure to the expensive US market has been meaningfully reduced, without eliminating assets that Orbis believes should outperform. This is an uncomfortable position if one anchors on the risks of the past, but in light of Orbis’ evaluation of today’s risks, it makes sense. The Fund has been positioned to offer some protection against the risks Orbis fears most and to perform well regardless of which of a range of possible scenarios plays out.

Over the last quarter, there have been no material changes to the Fund’s allocation of capital to the various Orbis funds, nor to its equity, currency and wider stock market exposures to the different regions. With regards to individual holdings, Aetna and Anthem, both US health insurance companies, entered the top 10 holdings, as Orbis believes that weak sentiment on the healthcare industry, amid regulatory concerns, has left selected high-quality businesses available at a meaningful discount to their intrinsic value. Other changes to the top 10 holdings were minimal and largely driven by price movements among Orbis’ preferred shares.

Notes for consideration

The availability of the Fund is subject to offshore capacity constraints. Please contact our Client Service Centre for further information about any constraints that may apply.

Management Company

Allan Gray Unit Trust Management (RF) Proprietary Limited (the 'Management Company') is registered as a management company under the Collective Investment Schemes Control Act 45 of 2002, in terms of which it operates 11 unit trust portfolios under the Allan Gray Unit Trust Scheme, and is supervised by the Financial Services Board ('FSB'). The Management Company is incorporated under the laws of South Africa and has been approved by the regulatory authority of Botswana to market its unit trusts in Botswana, however it is not supervised or licensed in Botswana. Allan Gray Proprietary Limited (the 'Investment Manager'), an authorised financial services provider, is the appointed Investment Manager of the Management Company and is a member of the Association for Savings & Investment South Africa (ASISA). The trustee/custodian of the Allan Gray Unit Trust Scheme is Rand Merchant Bank, a division of FirstRand Bank Limited. The trustee/custodian can be contacted at RMB Custody and Trustee Services: Tel: +27 (0)87 736 1732 or www.rmb.co.za

Performance

Collective Investment Schemes in Securities (unit trusts or funds) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to future performance. Movements in exchange rates may also cause the value of underlying international investments to go up or down. The Management Company does not provide any guarantee regarding the capital or the performance of the Fund. Performance figures are provided by the Investment Manager and are for lump sum investments with income distributions reinvested. Where annualised performance is mentioned, this refers to the average return per year over the period. Actual investor performance may differ as a result of the investment date, the date of reinvestment and dividend withholding tax.

Fund mandate

The Fund may be closed to new investments at any time in order to be managed according to its mandate. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. The Fund may borrow up to 10% of its market value to bridge insufficient liquidity.

Unit price

Unit trust prices are calculated on a net asset value basis, which is the total market value of all assets in the Fund including any income accruals and less any permissible deductions from the Fund divided by the number of units in issue. Forward pricing is used and fund valuations take place at approximately 16:00 each business day. Purchase and redemption requests must be received by the Management Company by 14:00 each business day to receive that day's price. Unit trust prices are available daily on www.allangray.co.za

Fees

Permissible deductions may include management fees, brokerage, Securities Transfer Tax (STT), auditor's fees, bank charges and trustee fees. A schedule of fees, charges and maximum commissions is available on request from Allan Gray.

Total expense ratio (TER) and Transaction costs

The total expense ratio (TER) is the annualised percentage of the Fund's average assets under management that has been used to pay the Fund's actual expenses over the past three years. The TER includes the annual management fees that have been charged (both the fee at benchmark and any performance component charged), VAT and other expenses like audit and trustee fees. Transaction costs (including brokerage, Securities Transfer Tax [STT], STRATE and FSB Investor Protection Levy and VAT thereon) are shown separately. Transaction costs are a necessary cost in administering the Fund and impact Fund returns. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of financial product, the investment decisions of the investment manager and the TER. Since Fund returns are quoted after the deduction of these expenses, the TER and Transaction costs should not be deducted again from published returns. As unit trust expenses vary, the current TER cannot be used as an indication of future TERs. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. Instead, when investing, the investment objective of the Fund should be aligned with the investor's objective and compared against the performance of the Fund. The TER and other funds' TERs should then be used to evaluate whether the Fund performance offers value for money. The sum of the TER and Transaction costs is shown as the Total investment charge.

FTSE World Index

FTSE is a trademark of the London Stock Exchange Group of Companies. The FTSE World Index is calculated by FTSE International Limited ('FTSE') in accordance with standard criteria and is the proprietary information of FTSE. All copyright subsisting in the FTSE World Index values and constituent lists vests in FTSE. All its rights are reserved.

Fund of funds

A fund of funds is a unit trust that invests in other unit trusts, which charge their own fees. Allan Gray does not charge any additional fees in its funds of funds.

Foreign exposure

The Fund invests in foreign funds managed by Orbis Investment Management Limited, our offshore investment partner.
