

Fund description and summary of investment policy

The Fund invests in a mix of equity, absolute return and multi-asset class funds managed by Allan Gray's offshore investment partner, Orbis Investment Management Limited. The typical net equity exposure of the Fund is between 40% and 75%. The Orbis Optimal SA funds included in the Fund use exchange-traded derivative contracts on stock market indices to reduce net equity exposure. In these funds, the market exposure of equity portfolios is effectively replaced with cash-like exposure, plus or minus Orbis' skills in delivering returns above or below the market. Returns are likely to be less volatile than those of an international equity-only fund. Although the Fund's investment universe is global, the units in the Fund are priced and traded daily in rands.

ASISA unit trust category: Global – Multi Asset – High Equity

Fund objective and benchmark

The Fund aims to create long-term wealth for investors without exceeding a maximum net equity exposure limit of 75%. It aims to outperform the average return of funds subject to similar constraints without taking on more than their average risk. The Fund's benchmark is a portfolio made up 60% by the FTSE World Index, including income, and 40% the JP Morgan Global Government Bond index.

How we aim to achieve the Fund's objective

The Fund invests in equity, absolute return and multi-asset class funds managed by our offshore investment partner, Orbis Investment Management Limited. Within all of the underlying funds, Orbis uses in-house research to identify companies around the world whose shares can be purchased for less than Orbis' assessment of their long-term intrinsic value. This long-term perspective enables them to buy shares which are shunned by the stock market because of their unexciting or poor short-term prospects, but which are relatively attractively priced if one looks to the long term. This is the same approach as that used by Allan Gray to invest in South African equities, except that Orbis is able to choose from many more shares, listed internationally. Depending on our assessment of the potential returns on global stock markets relative to their risk of capital loss, we actively manage the Fund's net exposure to equities by varying its exposure to the underlying Orbis funds. By varying the Fund's overall exposure to equities and also its geographic exposure, through selecting between the Orbis regional equity funds, we seek to enhance the Fund's long-term returns and to manage its risk. The Fund's currency exposure is actively managed both within the underlying Orbis funds and through our selection of Orbis funds.

Suitable for those investors who

- Seek long-term capital growth from a diversified international equity portfolio without being fully exposed to stock market risk
- Wish to invest in international assets without having to personally expatriate rands
- Are comfortable with taking on some risk of market and currency fluctuation and potential capital loss, but typically less than that of an equity fund
- Typically have an investment horizon of more than five years
- Wish to use the Fund as a foreign medium equity 'building block' in a diversified multi-asset class portfolio

Fund information on 28 February 2018

Fund size	R12.9bn

Additional lump sum	R500
Minimum debit order*	R500

*Only available to investors with a South African bank account.

- 60% of the FTSE World Index including income and 40% of the JP Morgan Global Government Bond Index (source: Bloomberg), performance as calculated by Allan Gray as at 28 February 2018.
- This is based on the latest numbers published by IRESS as at 31 January 2018.
- Maximum percentage decline over any period. The maximum rand drawdown occurred from 23 October 2008 to 14 October 2010 and maximum benchmark drawdown occurred from 23 October 2008 to 30 June 2009. Drawdown is calculated on the total return of the Fund/benchmark (i.e. including income).
- The percentage of calendar months in which the Fund produced a positive monthly return since inception.
- The standard deviation of the Fund's monthly return. This is a measure of how much an investment's return varies from its average over time.
- These are the highest or lowest consecutive 12-month returns since inception. This is a measure of how much the Fund and the benchmark returns have varied per rolling 12-month period. The Fund's highest annual return occurred during the 12 months ended 31 December 2013 and the benchmark's occurred during the 12 months ended 31 December 2013. The Fund's lowest annual return occurred during the 12 months ended 31 October 2010 and the benchmark's occurred during the 12 months ended 30 June 2009. All rolling 12-month figures for the Fund and the benchmark are available from our Client Service Centre on request.

Meeting the Fund objective

Since inception and over the latest 10 and five-year periods, the Fund has outperformed the benchmark and its returns have exceeded CPI inflation by a significant margin. The Fund experiences periods of underperformance in pursuit of its objective of creating long-term wealth for investors, without taking on greater risk of loss than similar funds in the Global – Multi Asset – High Equity sector.

Income distributions for the last 12 months

To the extent that income earned in the form of dividends and interest exceeds expenses in the Fund, the Fund will distribute any surplus annually.	31 Dec 2017
Cents per unit	0.3731

Annual management fee

Allan Gray does not charge an annual management fee but is paid a marketing and distribution fee by Orbis.

Orbis charges annual management fees within the underlying Orbis funds. Each fund's fee rate is calculated based on the fund's performance relative to its own benchmark. For more information please refer to the respective Orbis Funds' factsheets, which can be found at www.allangray.co.za

Total expense ratio (TER) and Transaction costs

The annual management fees charged by Orbis are included in the TER. The TER is a measure of the actual expenses incurred by the Fund over a one and three-year period (annualised). Since Fund returns are quoted after deduction of these expenses, the TER should not be deducted from the published returns (refer to page 4 for further information). Transaction costs are disclosed separately.

TER and Transaction costs breakdown for the 1 and 3-year period ending 31 December 2017	1yr %	3yr %
Total expense ratio	2.06	1.90
Fee for benchmark performance	1.44	1.39
Performance fees	0.54	0.43
Other costs excluding transaction costs	0.08	0.08
VAT	0.00	0.00
Transaction costs (including VAT)	0.14	0.13

Note: There may be slight discrepancies in the totals due to rounding.

Global stock markets were up by 22% in US dollars in 2017, setting new records. Despite flat yields and scant coupons, even global government bonds returned 7% (helped by US dollar weakness). Altogether, the Orbis Global Balanced Fund's 60/40 benchmark delivered an impressive 16% US dollar return, and the Fund fared better than that.

As one would expect, the Fund's outperformance was driven chiefly by equity and bond selection. Currency exposures also contributed, but the impact of the asset class stances was muted. Though it was a fun year to hold stocks, equity hedging costs offset some of the benefit of being overweight equities versus bonds.

After a year of strong returns, you might expect the portfolio to look substantially different. It doesn't. With few changes to discuss, this is a perfect time to revisit why certain companies and areas are attractive – and why Orbis has steered clear of others.

The Fund still holds zero government bonds, which offer low yields but involve substantial interest rate risk. The Fund also remains underweight the US dollar and US stocks, which continue to look expensive compared to equities in other regions.

One of those regions is Asia ex-Japan, the Fund's biggest regional overweight. More than half of this concentration is represented by just five technology-related companies: e-commerce operator JD.com, Samsung Electronics, internet company NetEase, Taiwan Semiconductor Manufacturing, and social media juggernaut Tencent. Orbis believes each of these companies offers above-average growth and cash generation potential, with minimal balance sheet risk.

Energy shares also continue to look attractively valued versus the wider market. While oil prices are now 13% above their levels of early 2015, US oil and gas producers have still not recovered. A continued oil price recovery is not essential for top holdings BP and Royal Dutch Shell, however. Both companies have refining businesses which have been more profitable recently than in 2013 (when oil fetched US\$95 a barrel). Increased discipline has helped BP and Shell improve their free cash flow. If this gives the market confidence in the sustainability of their dividends, we would expect their yields to come down from currently high levels of 6%.

AbbVie, a biopharmaceutical company and the Fund's largest holding, has been going from strength to strength. Investors have long fretted about competitive threats to the company's blockbuster drug Humira. In late 2017 AbbVie reached a settlement with rival Amgen that will delay serious US competition for Humira until 2023. AbbVie's shares have performed well since the Amgen announcement, but Orbis still believes the valuation does not fully reflect the long-term value of AbbVie's development pipeline.

Recent fortunes have been different for Bristol-Myers Squibb, another biopharmaceutical firm. With Bristol, the key drug to assess is the biologic Opdivo. Prior to the Fund's purchase, Bristol shot itself in the foot with a botched trial, which sought to establish new uses for Opdivo. Next year, Bristol is moving forward with a redesigned trial, which should stand a higher chance of securing new approvals. If the company successfully addresses its execution risk, the market should come to recognise the quality of the business and its development pipeline.

Orbis continues to believe that selected shares in Asia, energy, and healthcare offer potential for attractive returns without undue risks. With equity and bond valuations looking rich, Orbis believes that an active approach is a better bet in the current environment. Across asset classes, Orbis continues to build their funds from the bottom-up and remains excited by the quality of the opportunities that have been found.

There have been no material changes to the portfolio's allocation of capital to the Orbis funds, or to its equity, currency and regional exposures in the last quarter. With regards to individual holdings, Apache, a US oil and gas production and exploration company, fell out of the top 10 after its shares were punished for slower-than-expected progress in the development of its Alpine High field in West Texas.

Management Company

Allan Gray Unit Trust Management (RF) Proprietary Limited (the 'Management Company') is registered as a management company under the Collective Investment Schemes Control Act 45 of 2002, in terms of which it operates 11 unit trust portfolios under the Allan Gray Unit Trust Scheme, and is supervised by the Financial Services Board ('FSB'). The Management Company is incorporated under the laws of South Africa and has been approved by the regulatory authority of Botswana to market its unit trusts in Botswana, however it is not supervised or licensed in Botswana. Allan Gray Proprietary Limited (the 'Investment Manager'), an authorised financial services provider, is the appointed Investment Manager of the Management Company and is a member of the Association for Savings & Investment South Africa (ASISA). The trustee/custodian of the Allan Gray Unit Trust Scheme is Rand Merchant Bank, a division of FirstRand Bank Limited. The trustee/custodian can be contacted at RMB Custody and Trustee Services: Tel: +27 (0)87 736 1732 or www.rmb.co.za

Performance

Collective Investment Schemes in Securities (unit trusts or funds) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to future performance. Movements in exchange rates may also cause the value of underlying international investments to go up or down. The Management Company does not provide any guarantee regarding the capital or the performance of the Fund. Performance figures are provided by the Investment Manager and are for lump sum investments with income distributions reinvested. Where annualised performance is mentioned, this refers to the average return per year over the period. Actual investor performance may differ as a result of the investment date, the date of reinvestment and dividend withholding tax.

Fund mandate

The Fund may be closed to new investments at any time in order to be managed according to its mandate. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. The Fund may borrow up to 10% of its market value to bridge insufficient liquidity.

Unit price

Unit trust prices are calculated on a net asset value basis, which is the total market value of all assets in the Fund including any income accruals and less any permissible deductions from the Fund divided by the number of units in issue. Forward pricing is used and fund valuations take place at approximately 16:00 each business day. Purchase and redemption requests must be received by the Management Company by 14:00 each business day to receive that day's price. Unit trust prices are available daily on www.allangray.co.za

Fees

Permissible deductions may include management fees, brokerage, Securities Transfer Tax (STT), auditor's fees, bank charges and trustee fees. A schedule of fees, charges and maximum commissions is available on request from Allan Gray.

Total expense ratio (TER) and Transaction costs

The total expense ratio (TER) is the annualised percentage of the Fund's average assets under management that has been used to pay the Fund's actual expenses over the past one and three-year periods. The TER includes the annual management fees that have been charged (both the fee at benchmark and any performance component charged), VAT and other expenses like audit and trustee fees. Transaction costs (including brokerage, Securities Transfer Tax [STT], STRATE and FSB Investor Protection Levy and VAT thereon) are shown separately. Transaction costs are a necessary cost in administering the Fund and impact Fund returns. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of financial product, the investment decisions of the investment manager and the TER. Since Fund returns are quoted after the deduction of these expenses, the TER and Transaction costs should not be deducted again from published returns. As unit trust expenses vary, the current TER cannot be used as an indication of future TERs. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. Instead, when investing, the investment objective of the Fund should be aligned with the investor's objective and compared against the performance of the Fund. The TER and other funds' TERs should then be used to evaluate whether the Fund performance offers value for money. The sum of the TER and Transaction costs is shown as the Total investment charge.

FTSE World Index
