

Fund description and summary of investment policy

The Fund invests in a mix of equity, absolute return and multi-asset class funds managed by Allan Gray's offshore investment partner, Orbis Investment Management Limited. The typical net equity exposure of the Fund is between 40% and 75%. The Orbis Optimal SA funds included in the Fund use exchange-traded derivative contracts on stock market indices to reduce net equity exposure. In these funds, the market exposure of equity portfolios is effectively replaced with cash-like exposure, plus or minus Orbis' skills in delivering returns above or below the market. Returns are likely to be less volatile than those of an international equity-only fund. Although the Fund's investment universe is global, the units in the Fund are priced and traded daily in rands.

ASISA unit trust category: Global – Multi Asset – High Equity

Fund objective and benchmark

The Fund aims to create long-term wealth for investors without exceeding a maximum net equity exposure limit of 75%. It aims to outperform the average return of funds subject to similar constraints without taking on more than their average risk. The Fund's benchmark is a portfolio made up 60% by the FTSE World Index, including income, and 40% the JP Morgan Global Government Bond index.

How we aim to achieve the Fund's objective

The Fund invests in equity, absolute return and multi-asset class funds managed by our offshore investment partner, Orbis Investment Management Limited. Within all of the underlying funds, Orbis uses in-house research to identify companies around the world whose shares can be purchased for less than Orbis' assessment of their long-term intrinsic value. This long-term perspective enables them to buy shares which are shunned by the stock market because of their unexciting or poor short-term prospects, but which are relatively attractively priced if one looks to the long term. This is the same approach as that used by Allan Gray to invest in South African equities, except that Orbis is able to choose from many more shares, listed internationally. Depending on our assessment of the potential returns on global stock markets relative to their risk of capital loss, we actively manage the Fund's net exposure to equities by varying its exposure to the underlying Orbis funds. By varying the Fund's overall exposure to equities and also its geographic exposure, through selecting between the Orbis regional equity funds, we seek to enhance the Fund's long-term returns and to manage its risk. The Fund's currency exposure is actively managed both within the underlying Orbis funds and through our selection of Orbis funds.

Suitable for those investors who

- Seek long-term capital growth from a diversified international equity portfolio without being fully exposed to stock market risk
- Wish to invest in international assets without having to personally expatriate rands
- Are comfortable with taking on some risk of market and currency fluctuation and potential capital loss, but typically less than that of an equity fund
- Typically have an investment horizon of more than five years
- Wish to use the Fund as a foreign medium equity 'building block' in a diversified multi-asset class portfolio

Minimum debit order*	R500

*Only available to investors with a South African bank account.

- 60% of the FTSE World Index including income and 40% of the JP Morgan Global Government Bond Index (source: Bloomberg), performance as calculated by Allan Gray as at 31 July 2019.
- This is based on the latest numbers published by IRESS as at 30 June 2019.
- Maximum percentage decline over any period.
The maximum rand drawdown occurred from 23 October 2008 to 14 October 2010 and maximum benchmark drawdown occurred from 23 October 2008 to 30 June 2009. Drawdown is calculated on the total return of the Fund/benchmark (i.e. including income).
- The percentage of calendar months in which the Fund produced a positive monthly return since inception.
- The standard deviation of the Fund's monthly return. This is a measure of how much an investment's return varies from its average over time.
- These are the highest or lowest consecutive 12-month returns since inception. This is a measure of how much the Fund and the benchmark returns have varied per rolling 12-month period. The Fund's highest annual return occurred during the 12 months ended 31 December 2013 and the benchmark's occurred during the 12 months ended 31 December 2013. The Fund's lowest annual return occurred during the 12 months ended 31 October 2010 and the benchmark's occurred during the 12 months ended 30 June 2009. All rolling 12-month figures for the Fund and the benchmark are available from our Client Service Centre on request.

Meeting the Fund objective

Since inception and over the latest 10 and five-year periods, the Fund has underperformed its benchmark. The Fund has provided returns in excess of CPI inflation for all three periods. The Fund experiences periods of underperformance in pursuit of its objective of creating long-term wealth for investors, without taking on greater risk of loss than similar funds in the Global – Multi Asset – High Equity sector.

Income distributions for the last 12 months

To the extent that income earned in the form of dividends and interest exceeds expenses in the Fund, the Fund will distribute any surplus annually.	31 Dec 2018
Cents per unit	0.3169

Annual management fee

Allan Gray does not charge an annual management fee but is paid a marketing and distribution fee by Orbis.

Orbis charges annual management fees within the underlying Orbis funds. Each fund's fee rate is calculated based on the fund's performance relative to its own benchmark. For more information please refer to the respective Orbis Funds' factsheets, which can be found at www.allangray.co.za

Total expense ratio (TER) and Transaction costs

The annual management fees charged by Orbis are included in the TER. The TER is a measure of the actual expenses incurred by the Fund over a one and three-year period (annualised). Since Fund returns are quoted after deduction of these expenses, the TER should not be deducted from the published returns (refer to page 4 for further information). Transaction costs are disclosed separately.

TER and Transaction costs breakdown for the 1 and 3-year period ending 30 June 2019	1yr %	3yr %
Total expense ratio	1.76	1.95
Fee for benchmark performance	1.44	1.44

Note: There may be slight discrepancies in the totals due to rounding.

The performance of the Orbis SICAV Global Balanced Fund over the last year has been poor. These results have also dragged down the Fund's longer-term performance numbers, which are now far below the standards we set for ourselves.

We appreciate how uncomfortable these periods are. It is challenging to hear the market shouting that you are wrong, even when the fundamental evidence says you are right. But maintaining our discipline in the face of this discomfort is at the core of our job, and we believe it is the very reason we can add value over the long term.

As we would always expect, the recent performance was driven chiefly by our security selection, not by our stances towards different asset classes. This is by design. We aim to deliver maximum exposure to our security selection skill, while maintaining a risk profile consistent with the Fund's mandate. In 2018, we had our fair share of losers, had few big winners, and suffered as dislocations between prices and fundamentals widened for many of our favourite (and least favourite) securities.

The underperformance in 2019 has been a different story. In our view, the trends that have hurt returns are clearly cases of market prices moving ever further away from fundamentals. This leaves us more enthusiastic about the relative return potential of the portfolio. This divergence is clear in fixed income, where a record near-\$13 trillion of bonds globally now trade at negative yields. It's also clear in the substantial outperformance of financial assets (like stocks and bonds) over hard assets (like commodities). It makes sense that central bank money printing would push up stock and bond prices, but not compared to commodities. Central banks can't print gold and oil.

The most significant trends year to date have occurred within equities. Some might remember what came to be called the TMT (Tech, Media, Telecom) bubble of the late 1990s. The narrowness of the current market is beginning to bear some striking similarities to this period. In 1999, the very largest stocks were driving the market higher to the exclusion of all else. The same is happening now, both globally and in the US.

The headline indices are dominated by the largest shares, and they're doing fine. The top 50 shares in the US set new record highs last January, again in October, and again this April. But if we look instead at an equal weighted index of global stocks, we see that the average stock remains mired 18 months into a bear market that started on 26 January 2018. Well, so what? Maybe these trends are justified by fundamentals. But they aren't. Once again, non-fundamental drivers appear to have taken the steering wheel.

In the current environment, it's clear that, as ever, investors don't take the same degree of comfort from all quality companies. Good businesses with hard-to-see risks trade at great company prices, and good businesses with easy-to-see risks trade at bad company prices.

For example, consider our discussion of Coca-Cola last quarter. To recap: the company's revenues and earnings have failed to grow, it is paying out every cent it earns to support the dividend, and it is piling on ever more debt. Those are big fundamental risks, but they aren't obvious, and they will never be on the front page of a newspaper. Google, on the other hand, has an obvious, front-page-friendly risk: tech regulation.

Today, in the collective wisdom of investors, 0% growth Coke merits a valuation of 32 times earnings, while Google, which has grown revenues and earnings by over 15% per annum, merits a valuation of 24 times (ex-cash) earnings. To us, that looks nutty! And yet Coke has been, by far, the more comfortable company to own over the last three months. But it doesn't for one second make us think we should sell Google and buy Coke.

At a high level, that is one of the dominant patterns in the portfolio today. We own what we think are some very high-quality businesses that the market has excessively punished for having obvious risks – and we don't own what we think are the stretched businesses trading at silly prices. Shares of underappreciated but fundamentally strong businesses currently represent over a third of the Orbis SICAV Global Balanced Fund. That leaves us increasingly enthusiastic about what we own and new opportunities the market is coughing up. We believe that the divergence among securities is extreme and at irrational levels. Unfortunately, irrationality doesn't correct on any set schedule, and we humbly appreciate your patience while we wait this out.

In the past quarter, the biggest addition was to German car manufacturer, BMW. The largest sale was a specialty financial services company bond. The Fund's asset allocation remained unchanged over the quarter.

Management Company

Allan Gray Unit Trust Management (RF) Proprietary Limited (the 'Management Company') is registered as a management company under the Collective Investment Schemes Control Act 45 of 2002, in terms of which it operates 11 unit trust portfolios under the Allan Gray Unit Trust Scheme, and is supervised by the Financial Sector Conduct Authority ('FSCA'). The Management Company is incorporated under the laws of South Africa and has been approved by the regulatory authority of Botswana to market its unit trusts in Botswana, however it is not supervised or licensed in Botswana. Allan Gray Proprietary Limited (the 'Investment Manager'), an authorised financial services provider, is the appointed Investment Manager of the Management Company and is a member of the Association for Savings & Investment South Africa ('ASISA'). The trustee/custodian of the Allan Gray Unit Trust Scheme is Rand Merchant Bank, a division of FirstRand Bank Limited. The trustee/custodian can be contacted at RMB Custody and Trustee Services: Tel: +27 (0)87 736 1732 or www.rmb.co.za

Performance

Collective Investment Schemes in Securities (unit trusts or funds) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to future performance. Movements in exchange rates may also cause the value of underlying international investments to go up or down. The Management Company does not provide any guarantee regarding the capital or the performance of the Fund. Performance figures are provided by the Investment Manager and are for lump sum investments with income distributions reinvested. Where annualised performance is mentioned, this refers to the average return per year over the period. Actual investor performance may differ as a result of the investment date, the date of reinvestment and dividend withholding tax.

Fund mandate

The Fund may be closed to new investments at any time in order to be managed according to its mandate. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. The Fund may borrow up to 10% of its market value to bridge insufficient liquidity.

Unit price

Unit trust prices are calculated on a net asset value basis, which is the total market value of all assets in the Fund including any income accruals and less any permissible deductions from the Fund divided by the number of units in issue. Forward pricing is used and fund valuations take place at approximately 16:00 each business day. Purchase and redemption requests must be received by the Management Company by 14:00 each business day to receive that day's price. Unit trust prices are available daily on www.allangray.co.za

Fees

Permissible deductions may include management fees, brokerage, Securities Transfer Tax (STT), auditor's fees, bank charges and trustee fees. A schedule of fees, charges and maximum commissions is available on request from Allan Gray.

Total expense ratio (TER) and Transaction costs

The total expense ratio (TER) is the annualised percentage of the Fund's average assets under management that has been used to pay the Fund's actual expenses over the past one and three-year periods. The TER includes the annual management fees that have been charged (both the fee at benchmark and any performance component charged), VAT and other expenses like audit and trustee fees. Transaction costs (including brokerage, Securities Transfer Tax [STT], STRATE and Investor Protection Levy and VAT thereon) are shown separately. Transaction costs are a necessary cost in administering the Fund and impact Fund returns. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of financial product, the investment decisions of the investment manager and the TER. Since Fund returns are quoted after the deduction of these expenses, the TER and Transaction costs should not be deducted again from published returns. As unit trust expenses vary, the current TER cannot be used as an indication of future TERs. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. Instead, when investing, the investment objective of the Fund should be aligned with the investor's objective and compared against the performance of the Fund. The TER and other funds' TERs should then be used to evaluate whether the Fund performance offers value for money. The sum of the TER and Transaction costs is shown as the Total investment charge ('TIC').

FTSE World Index

FTSE is a trademark of the London Stock Exchange Group of Companies. The FTSE World Index is calculated by FTSE International Limited ('FTSE') in accordance with standard criteria and is the proprietary information of FTSE. All copyright subsisting in the FTSE World Index values and constituent lists vests in FTSE. All its rights are reserved.

Fund of funds

A fund of funds is a unit trust that invests in other unit trusts, which charge their own fees. Allan Gray does not charge any additional fees in its funds of funds.

Foreign exposure

The Fund invests in foreign funds managed by Orbis Investment Management Limited, our offshore investment partner.
