

## ALLAN GRAY-ORBIS GLOBAL OPTIMAL FUND OF FUNDS

**Fund managers:** Duncan Artus. (The underlying Orbis funds are managed by Orbis.) **Inception date:** 2 March 2010

### Fund description and summary of investment policy

The Fund invests in a mix of absolute return funds managed by Allan Gray's offshore investment partner, Orbis Investment Management Limited. The typical net equity exposure of the Fund is between 0% and 20%. The Orbis Optimal SA funds included in the Fund use exchange-traded derivative contracts on stock market indices to reduce net equity exposure. In these funds, the market exposure of equity portfolios is effectively replaced with cash-like exposure, plus or minus Orbis' skills in delivering returns above or below the market. Returns are likely to be less volatile than those of a foreign equity or balanced fund. Although the Fund is fully invested outside South Africa, the units in the Fund are priced and traded daily in rands. When considered in rands, returns of this foreign fund are likely to be more volatile than domestic funds with similar equity constraints.

**ASISA unit trust category:** Global - Multi Asset - Low Equity

### Fund objective and benchmark

The Fund aims to provide a high degree of capital stability (when measured in the foreign currency denominations of the underlying Orbis Funds), while producing long-term returns that are superior to foreign currency bank deposits. The Fund's benchmark is the simple average of the benchmarks of the underlying Orbis funds.

### How we aim to achieve the Fund's objective

The Fund invests only in the Optimal SA absolute return funds managed by our offshore investment partner, Orbis Investment Management Limited. Within the Optimal funds, Orbis uses in-house research to identify companies around the world whose shares can be purchased for less than Orbis' assessment of their long-term intrinsic value. This long-term perspective enables them to buy shares which are shunned by the stock market because of their unexciting or poor short-term prospects, but which are relatively attractively priced if one looks to the long term. This is the same approach as that used by Allan Gray to invest in South African equities, except that Orbis is able to choose from many more shares, listed internationally.

The Orbis Optimal SA funds reduce most of their stock market risk by the use of exchange-traded derivative futures contracts. The Orbis Optimal SA funds will typically retain a small portion of their exposure to equity markets, but the level of exposure may be varied depending on Orbis' assessment of the potential returns on global stock markets relative to their risk of capital loss. The underlying funds' returns are therefore derived partly from their relatively low exposure to stock markets, partly from Orbis' selected share returns relative to those markets, and partly from foreign currency cash-equivalent returns. The Fund's currency exposure is actively managed both within the underlying Orbis funds and through our selection of Orbis funds.

### Suitable for those investors who

- Seek steady absolute returns ahead of those of cash measured in global currencies
- Wish to invest in international assets without having to personally expatriate rands
- Are comfortable with taking on the risk of currency fluctuation, but prefer little exposure to stock market risk
- Wish to use the Fund as a foreign absolute return 'building block' in a diversified multi-asset class portfolio

### Minimum investment amounts

Minimum lump sum per investor account	R20 000
Additional lump sum	R500
Minimum debit order*	R500

\*Only available to investors with a South African bank account.

### Fund information on 30 November 2016

1. The simple average of the benchmarks of the underlying funds, performance as calculated by Allan Gray as at 30 November 2016.

2. This is based on the latest numbers published by INET BFA as at 31 October 2016.

3. Maximum percentage decline over any period. The maximum rand drawdown occurred from 21 May 2010 to 29 December 2010 and maximum benchmark drawdown occurred from 18 January 2016 to 8 November 2016. Drawdown is calculated on the total return of the Fund/benchmark (i.e. including income).

4. The percentage of calendar months in which the Fund produced a positive monthly return since inception.

5. The standard deviation of the Fund's monthly return. This is a measure of how much an investment's return varies from its average over time.

6. These are the highest or lowest consecutive 12-month returns since inception. This is a measure of how much the Fund and the benchmark returns have varied per rolling 12-month period. The Fund's highest annual return occurred during the 12 months ended 31 December 2013 and the benchmark's occurred during the 12 months ended 31 January 2016. The Fund's lowest annual return occurred during the 12 months ended 31 January 2015 and the benchmark's occurred during the 12 months ended 28 February 2011. All rolling 12-month figures for the Fund and the benchmark are available from our Client Service Centre on request.

## ALLAN GRAY-ORBIS GLOBAL OPTIMAL FUND OF FUNDS

### Meeting the Fund objective

Since inception and over the latest five-year period, the Fund has outperformed its benchmark, although it should be noted that the returns on dollar and euro cash have been low over this period. There has been some volatility in the Fund's returns. The underlying funds' maximum drawdowns to date, in their reporting currencies, are 10% for the Orbis Optimal SA Dollar class and 7% for the Orbis Optimal SA Euro class.

### Income distributions for the last 12 months

To the extent that income earned in the form of dividends and interest exceeds expenses in the Fund, the Fund will distribute any surplus annually.	31 Dec 2015
<b>Cents per unit</b>	<b>0.0000</b>

### Annual management fee

Allan Gray does not charge an annual management fee but is paid a marketing and distribution fee by Orbis.

Orbis charges annual management fees within the underlying Orbis funds. Each fund's fee rate is calculated based on the fund's performance relative to its own benchmark. For more information please refer to the respective Orbis Funds' factsheets, which can be found at [www.allangray.co.za](http://www.allangray.co.za)

### Total expense ratio (TER) and Transaction costs

The annual management fees charged by Orbis are included in the TER. The TER is a measure of the actual expenses incurred by the Fund over a 3-year period (annualised). Since Fund returns are quoted after deduction of these expenses, the TER should not be deducted from the published returns (refer to page 4 for further information). Transaction costs are disclosed separately.

TER and Transaction costs breakdown for the 3-year period ending 30 September 2016	%
<b>Total expense ratio</b>	<b>1.36</b>
Fee for benchmark performance	1.00
Performance fees	0.29
Other costs excluding transaction costs	0.07
VAT	0.00
<b>Transaction costs (including VAT)</b>	<b>0.15</b>
<b>Total investment charge</b>	<b>1.51</b>

**Fund manager quarterly commentary as at 30 September 2016**

In recent quarters, Orbis has observed a dislocation emerge between the shares of 'stable' or 'defensive' businesses in areas such as healthcare and consumer staples, and more cyclical companies with a greater degree of future earnings uncertainty. Orbis has found more compelling investments in the more cyclical areas such as financials, basic materials, emerging markets and autos.

Orbis has identified a number of investment opportunities in the auto sector, which presents a particularly interesting case study. Nissan Motor, its largest holding in the sector, is a Japanese automaker that has alliances with both Renault and Russia's largest automaker, AVTOVAZ, and is in the process of acquiring a meaningful stake in Mitsubishi Motors, which will provide the alliance with scale comparable to that of the 'Big 3' automakers – Toyota Motor, General Motors and Volkswagen.

Nissan's current depressed valuation reflects a broad spectrum of investor concerns. Both global vehicle sales (especially in the US) and original equipment manufacturer (OEM) operating margins are considered unsustainably high. Growth in emerging market demand is being called into question. A volatile oil price and volatile currencies are clouding the picture for short-term sales and earnings at a time when investors prize earnings visibility.

Many of these risks are real, but are also cyclical or short term in nature, and thus shouldn't substantially impact the long-term performance of the business in Orbis' view. The most credible threat to cross-cycle performance, and therefore the intrinsic value of Nissan and other auto companies, is technology disruption. Increased penetration of electric vehicles may lead to increased competition and some argue that proliferation of self-driving cars will have dramatic consequences for vehicle sales and pricing, the former via growth in car sharing and the latter through vehicle commoditisation.

Orbis believes these technology developments may not be unambiguously negative for the OEMs. Self-driving vehicles may lead to greater car-sharing, but that could be somewhat offset by shorter replacement cycles driven by both heavier usage and more frequent technological improvements. Fully autonomous cars may also take share from other modes of transport such as trains, buses, trams, and underground networks.

The OEMs are clearly cognisant of the disruption risk and many (including Nissan) are investing heavily in electric vehicles and self-driving technology. In addition, uncertainty over how the industry will evolve over the coming years is driving a more cautious approach to fleet capacity additions across the sector. This should support greater profit margins for boring old human-driven vehicles absent any significant demand shocks.

Unlike most peers, Nissan's operating margins are not at peak levels versus history. Nissan expanded production capacity between 2011 and 2014, especially in emerging markets, just as demand in those markets started to sag. However, its larger presence could be rewarded if emerging markets gain steam, particularly Russia, where its stake in AVTOVAZ gives it a strong foothold in a market with high import taxes and modest levels of car ownership.

Investors have a tendency to observe the world through a deterministic lens, with outcomes being an inevitable consequence of a series of logical steps. In reality, the path of history is chaotic, with outcomes hugely sensitive to small changes in, and interactions between, thousands of variables. This is a long-winded way of saying that the future of the auto industry is unknowable, but what is obvious is the above-average investor pessimism toward the sector. As we have seen throughout our shared history as contrarian investors, it's quite often times like these that present the greatest contrarian opportunities.

Orbis typically retains modest long exposure to the stock markets they consider to be the most attractive based on their bottom-up research and likewise uses hedging to eliminate exposure to those stock markets where they believe assets are overvalued. The Fund has increased its exposure to Japanese and European stock markets, reflecting Orbis' conviction that they now appear broadly undervalued. These increased market exposures were offset by a slight reduction in the Fund's net long exposure to selected Asian stock markets, which nevertheless remains meaningful, as Orbis has identified a high concentration of attractively priced shares in the region. Despite Asian stock markets' strong returns in the year-to-date, Orbis believes valuations remain attractive relative to both developed markets and historical levels. There have been no material changes to the portfolio's currency exposures or to its key individual positions, with the top ten holdings largely unchanged.

## ALLAN GRAY-ORBIS GLOBAL OPTIMAL FUND OF FUNDS

### Notes for consideration

The availability of the Fund is subject to offshore capacity constraints. Please contact our Client Service Centre for further information about any constraints that may apply.

### Management Company

Allan Gray Unit Trust Management (RF) Proprietary Limited (the 'Management Company') is registered as a management company under the Collective Investment Schemes Control Act 45 of 2002, in terms of which it operates 11 unit trust portfolios under the Allan Gray Unit Trust Scheme, and is supervised by the Financial Services Board ('FSB'). The Management Company is incorporated under the laws of South Africa and has been approved by the regulatory authority of Botswana to market its unit trusts in Botswana, however it is not supervised or licensed in Botswana. Allan Gray Proprietary Limited (the 'Investment Manager'), an authorised financial services provider, is the appointed Investment Manager of the Management Company and is a member of the Association for Savings & Investment South Africa (ASISA). The trustee/custodian of the Allan Gray Unit Trust Scheme is Rand Merchant Bank, a division of FirstRand Bank Limited. The trustee/custodian can be contacted at RMB Custody and Trustee Services: Tel: +27 (0)87 736 1732 or [www.rmb.co.za](http://www.rmb.co.za)

### Performance

Collective Investment Schemes in Securities (unit trusts or funds) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to future performance. Movements in exchange rates may also cause the value of underlying international investments to go up or down. The Management Company does not provide any guarantee regarding the capital or the performance of the Fund. Performance figures are provided by the Investment Manager and are for lump sum investments with income distributions reinvested. Where annualised performance is mentioned, this refers to the average return per year over the period. Actual investor performance may differ as a result of the investment date, the date of reinvestment and dividend withholding tax.

### Fund mandate

The Fund may be closed to new investments at any time in order to be managed according to its mandate. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. The Fund may borrow up to 10% of its market value to bridge insufficient liquidity.

### Unit price

Unit trust prices are calculated on a net asset value basis, which is the total market value of all assets in the Fund including any income accruals and less any permissible deductions from the Fund divided by the number of units in issue. Forward pricing is used and fund valuations take place at approximately 16:00 each business day. Purchase and redemption requests must be received by the Management Company by 14:00 each business day to receive that day's price. Unit trust prices are available daily on [www.allangray.co.za](http://www.allangray.co.za)

### Fees

Permissible deductions may include management fees, brokerage, Securities Transfer Tax (STT), auditor's fees, bank charges and trustee fees. A schedule of fees, charges and maximum commissions is available on request from Allan Gray.

### Total expense ratio (TER) and Transaction costs

The total expense ratio (TER) is the annualised percentage of the Fund's average assets under management that has been used to pay the Fund's actual expenses over the past three years. The TER includes the annual management fees that have been charged (both the fee at benchmark and any performance component charged), VAT and other expenses like audit and trustee fees. Transaction costs (including brokerage, Securities Transfer Tax [STT], STRATE and FSB Investor Protection Levy and VAT thereon) are shown separately. Transaction costs are a necessary cost in administering the Fund and impact Fund returns. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of financial product, the investment decisions of the investment manager and the TER. Since Fund returns are quoted after the deduction of these expenses, the TER and Transaction costs should not be deducted again from published returns. As unit trust expenses vary, the current TER cannot be used as an indication of future TERs. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. Instead, when investing, the investment objective of the Fund should be aligned with the investor's objective and compared against the performance of the Fund. The TER and other funds' TERs should then be used to evaluate whether the Fund performance offers value for money. The sum of the TER and Transaction costs is shown as the Total investment charge.

### Fund of funds

A fund of funds is a unit trust that invests in other unit trusts, which charge their own fees. Allan Gray does not charge any additional fees in its funds of funds.

### Foreign exposure

The Fund invests in foreign funds managed by Orbis Investment Management Limited, our offshore investment partner.
