

Allan Gray Balanced Fund

Fund managers: Ian Liddle, Duncan Artus,
Andrew Lapping, Simon Raubenheimer
(Most foreign assets are invested in Orbis funds)

Inception date: 1 October 1999

Class: A

Fund information on 31 July 2012

Fund size: R55 057m

Fund price: R62.74

Number of share holdings: 92

Fund description

The Fund invests in a mix of shares, bonds, property, commodities and cash. The Fund may buy foreign assets up to a maximum of 25% of the Fund. The Fund typically invests the bulk of its foreign allowance in a mix of funds managed by Orbis Investment Management Limited, our offshore investment partner. The maximum net equity exposure of the Fund is 75% and we may use exchange-traded derivative contracts on stock market indices to reduce net equity exposure from time to time. The Fund is managed to comply with the investment limits governing retirement funds. Returns are likely to be less volatile than those of an equity-only fund.

ASISA unit trust category: Domestic - Asset Allocation - Prudential Variable Equity

Fund objective and benchmark

The Fund aims to create long-term wealth for investors within the constraints governing retirement funds. It aims to outperform the average return of similar funds without assuming any more risk. The Fund's benchmark is the market value-weighted average return of funds in both the Prudential Medium Equity category and the Prudential Variable Equity category (excluding the Allan Gray Balanced Fund).

How we aim to achieve the Fund's objective

We seek to buy shares at a discount to their intrinsic value. We thoroughly research companies to assess their intrinsic value from a long-term perspective. This long-term perspective enables us to buy shares which are shunned by the stock market because of their unexciting or poor short-term prospects, but which are relatively attractively priced if one looks to the long term. If the stock market offers few attractive shares we may increase the Fund's weighting to alternative assets such as bonds, property, commodities and cash, or we may partially hedge the Fund's stock market exposure. By varying the Fund's exposure to these different asset classes over time, we seek to enhance the Fund's long-term returns and to manage its risk. The Fund's bond and money market investments are actively managed.

Suitable for those investors who

- Seek steady long-term capital growth
- Are comfortable with taking on some risk of market fluctuation and potential capital loss, but typically less than that of an equity fund
- Wish to invest in a unit trust that complies with retirement fund investment limits
- Typically have an investment horizon of more than three years

Minimum investment amounts

Minimum lump sum per investor account: R20 000

Additional lump sum: R500

Minimum debit order*: R500

*Only available to South African residents.

Annual management fee

The annual management fee rate is dependent on the return of the Fund relative to its benchmark, the daily average return weighted by market value of funds in both the Domestic Asset Allocation Prudential Medium and Prudential Variable Equity categories excluding the Allan Gray Balanced Fund, over a rolling two-year period. The fee hurdle (above which a fee greater than the minimum fee of 0.5% is charged) is performance equal to the benchmark minus 5%. For performance equal to the benchmark a fee of 1.0% (excl. VAT) per annum is payable. The manager's sharing rate is 10% of the out- and underperformance of the benchmark over a rolling two-year period and a maximum fee of 1.5% (excl. VAT) applies. The annual management fee is calculated on the daily value of the Fund excluding any assets invested in the Orbis funds. Assets invested in the Orbis funds incur a management fee within the Orbis funds. These fees and other expenses are included in the total expense ratio.

Income distributions for the last 12 months

To the extent that income earned in the form of dividends and interest exceeds expenses in the Fund, the Fund will distribute any surplus biannually.	31 Dec 2011	30 Jun 2012

Annualised monthly volatility ⁵	9.6	10.0	n/a

1. The daily average return weighted by market value of funds in both the Domestic Asset Allocation Prudential Medium and Prudential Variable Equity categories excluding the Allan Gray Balanced Fund (Source: Morningstar), performance as calculated by Allan Gray as at 31 July 2012.

2. This is based on the latest numbers published by I-Net Bridge as at 30 June 2012.

3. Maximum percentage decline over any period. The maximum drawdown occurred from 20 May 2008 to 27 October 2008 and maximum benchmark drawdown occurred from 20 May 2008 to 10 March 2009. Drawdown is calculated on the total return of the Fund/benchmark (i.e. including income).

4. The percentage of calendar months in which the Fund produced a positive monthly return since inception.

5. The standard deviation of the Fund's monthly return. This is a measure of how much an investment's return varies from its average over time.

Total expense ratio (TER)

The TER for the year ending 30 June 2012 is 1.46% and included in this is a performance fee of 0.20% and trading costs of 0.08%. The annual management fee rate for the three months ending 31 July 2012 was 1.19% (annualised). These figures are inclusive of VAT, where applicable. Fund returns are quoted after deduction of costs incurred within the Fund so the TER should not be deducted from Fund returns (refer to page 2 for further information).

Fund manager quarterly commentary as at 30 June 2012

After a strong bounce in 2009 from the lows in the first quarter of that year, stock markets around the world have made little net progress in the last two and a half years. The MSCI World Index has appreciated by 5.8% in US dollars since January 2010, but the path has been bumpy.

Some markets, such as the American stock market, are up since January 2010. However, the Shanghai Composite Index is down substantially since then, as are the local stock market indices in the weaker European countries. The peripheral European countries are tipping one by one into a self-reinforcing spiral of austerity, deflation, banking crisis and recession/depression. The evidence so far suggests that policymakers are powerless to stop the tide. As the rot spreads to Spain and Italy (their football teams are in better shape than their public finances), the global impact will probably become more marked.

Bond investors are becoming much more discerning about who they lend their money to. They are facing up to the reality that some sovereigns may default on their obligations. So while Spain is being crippled by 10-year bond yields over 6%, Germany currently pays a yield of around 1.5% on its 10-year bonds. US 10-year bond yields recently hit an all-time low of 1.47%.

We believe that the spread between the yields on 'safe' and 'risky' debt could continue to grow. But that is not to say that we see great value in 10-year US bonds either. If the US continues to overspend, as it is currently doing, it is surely just a matter of time before investors start pricing some default risk into US bonds too. We believe that this is generally *not* a good time to be chasing yield in global markets by taking on significant credit or duration risk. While short-term interest rates are currently very low, lending short-term money to safer counterparties and holding hedged equities may prove to be the best places to hide in the event that the European credit crisis spills over to the rest of the world.

Top 10 share holdings on 30 June 2012 (SA and Foreign) (updated quarterly)

Company	% of portfolio
Sasol	5.3
British American Tobacco	5.2
SABMiller	4.4
Remgro	3.1

Disclaimer

The Fund may be closed to new investments at any time in order to be managed in accordance with its mandate. Permissible deductions may include management fees, brokerage, STT, auditor's fees, bank charges and trustee fees. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. The Fund may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. The FTSE/JSE All Share Index is calculated by FTSE International Limited ('FTSE') in conjunction with the JSE Limited ('JSE') in accordance with standard criteria. The FTSE/JSE Africa Series is the proprietary information of FTSE and the JSE. All copyright subsisting in the FTSE/JSE All Share Index values and constituent lists vests in FTSE and the JSE jointly. All their rights are reserved. Allan Gray Unit Trust Management (RF) Proprietary Limited ("the Company") is a member of the Association for Savings & Investment SA (ASISA). Allan Gray Proprietary Limited, an authorised financial services provider, is the appointed investment manager of the Company. The Company is incorporated and registered under the laws of South Africa and is supervised by the Financial Services Board. The Company has been approved by the Regulatory Authority of Botswana to market its unit trusts in Botswana, however it is not supervised or licensed in Botswana.

Compliance with Regulation 28

The Fund is managed to comply with Regulation 28 of the Pension Funds Act. Exposures in excess of the limits will be corrected immediately, except where due to a change in the fair value or characteristic of an asset, e.g market value fluctuations, in which case they will be corrected within a reasonable time period. Allan Gray Unit Trust Management (RF) Proprietary Limited does not monitor compliance by retirement funds with section 19(4) of the Pension Funds Act (item 6 of Table 1 to Regulation 28).

Unit price

Unit trust prices are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any permissible deductions from the portfolio divided by the number of units in issue. Forward pricing is used and Fund valuations take place at approximately 16:00 each business day. Purchase and redemption requests must be received by the manager by 14:00 each business day to receive that day's price. Fluctuations and movements in exchange rates may also cause the value of underlying international investments to go up or down.

Fees

A schedule of fees, charges and maximum commissions is available on request from the manager. Commission and incentives may be paid and if so, would be included in the overall costs.

TER

*TERs are shown for class A units only

The Total Expense Ratio (TER) is the percentage of the fund's average assets under management that has been used to pay the fund's operating expenses over the past year. The TER includes the annual management fees that have been charged (both the fee at benchmark and any performance component charged), trading costs (including brokerage, STT, STRATE and insider trading levy), VAT and other expenses. Since unit trust expenses vary, the current TER cannot be used as an indication of future TERs. All Allan Gray performance figures are quoted after the deduction of costs incurred within the Fund so the TER is not a new cost. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. Instead, when investing, the investment objective of the Fund should be aligned with the investor's objective and compared against the performance of the Fund. TERs should then be used to evaluate whether the Fund performance offers value for money.

Performance

Collective Investment Schemes in Securities (unit trusts) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to the future. Performance figures are from Allan Gray Proprietary Limited and are for lump sum investments with income distributions reinvested.
