

FUND DETAILS AT 31 AUGUST 2010

Sector: Domestic - Fixed Interest - Bond
Inception date: 1 October 2004
Fund managers: Sandy McGregor, Andrew Lapping

Fund objective:

The objective of the Fund is to provide investors with a return superior to the All Bond Index, at no greater risk, over an interest rate cycle. The Fund will seek to preserve at least the nominal value of investors' capital.

Suitable for those investors who:

- Are looking for returns in excess of that provided by money market or cash investments
- Seek a bond 'building block' for a diversified multi-asset class portfolio
- Are prepared to accept some risk of capital depreciation in exchange for the prospect of earning increased returns
- Want to draw a regular income stream without consuming capital

Price: R 10.94
Size: R 245 m
Minimum lump sum per investor account: R20 000
Minimum lump sum per fund: R5 000
Minimum debit order per fund: R 500
Additional lump sum per fund: R 500
No. of bond holdings: 38
Fund duration: 3.90
Gross yield (before fees as at 30 June 2010): 7.92%

Income distribution: 01/07/09 - 30/06/10 (cents per unit) Total 84.61
Distributes quarterly.

Annual management fee:

The annual management fee rate is dependent on the return of the Fund relative to its benchmark, the BEASSA Total Return All Bond Index (adjusted for fund expenses and cash flows) over a rolling one-year period. The fee hurdle (above which a fee greater than the minimum fee of 0.25% is charged) is performance equal to the benchmark. The manager's sharing rate is 25% of the outperformance of the benchmark over a rolling one-year period with a maximum fee of 0.75% (excl. VAT) per annum.

COMMENTARY

Deflationary forces in Europe and America are manifesting themselves in increased private sector savings, some of which are flowing into South Africa. During the first eight months of 2010 foreigners have invested a net R72 billion in South African (SA) bonds. These flows have more than compensated for the shortfall in domestic savings, and have strengthened the rand, which in turn has had a beneficial effect on inflation. As a consequence SA bond yields have declined significantly, and the Reserve Bank has cut short-term rates by a further 0.5%.

We remain cautious about these trends because they cannot continue indefinitely and any reversal in investment flows could seriously weaken the rand and cause a big sell-off in the bond markets. Accordingly, the Fund's duration remains significantly below its All Bond Index benchmark.

TOTAL EXPENSE RATIO FOR THE YEAR ENDED 30 JUNE 2010 ³

Total expense ratio	Included in TER			
	Trading costs	Performance component	Fee at benchmark	Other expenses
0.80%	0.00%	0.45%	0.29%	0.06%

³ A Total Expense Ratio (TER) is a measure of a portfolio's assets that are relinquished as operating expenses. The total operating expenses are expressed as a percentage of the average value of the portfolio, calculated for the year to the end of June 2010. Included in the TER is the proportion of costs that are incurred by the performance component, fee at benchmark, trading costs (including brokerage, VAT, STT, STRATE and insider trading levy) and other expenses. These are disclosed separately as percentages of the net asset value. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TERs. The information provided is applicable to class A units.
