- Since inception to 31 March 2003, the benchmark was the Alexander Forbes 3-Month Deposit Index. The current benchmark is the Domestic Fixed Interest Money Market Unit Trust sector excluding the Allan Gray Money Market Fund.

Calculating the Running Yield

The daily published yields are effective annual yields based on the seven-day rolling average yield.

The monthly distribution is based on the actual interest accrued during that month.

Calculation: the accrual in cents per unit for the previous seven days is converted into an average annual nominal yield and divided by the compounding factor to obtain a periodic effective rate. This figure is then converted to an annual effective rate.

Target Market

The Allan Gray Money Market Fund invests in selected money market instruments providing a high income yield. The average term to maturity does not exceed 90 days.

The Allan Gray Money Market Fund is suitable for those investors who:

- are seeking a short-term parking place for their funds during times of market volatility;
- are highly risk-averse; and / or
- need to be able to access their funds within 24 hours (as opposed to a fixed deposit).
