

Fund managers: Andrew Lapping, Mark Dunley-Owen
Inception date: 1 July 2001
Class: A

Fund description

The Fund invests in South African money market instruments with a term shorter than one year. These instruments can be issued by government, parastatals, corporates and banks. The Fund is managed to comply with regulations governing retirement funds.

While capital losses are unlikely, they can occur if, for example, one of the issuers of an instrument in the Fund defaults. In this event losses will be borne by the Fund and its investors.

ASISA unit trust category: South African - Interest Bearing - Money Market

Fund objective and benchmark

The Fund aims to preserve capital, maintain liquidity and generate a sound level of income. The Fund's benchmark is the Alexander Forbes Short Term Fixed Interest (STeFI) Composite Index.

How we aim to achieve the Fund's objective

The Fund invests in selected money market instruments providing an income yield and a high degree of capital stability. We formulate an interest rate outlook, which is influenced by our inflation outlook and expectations of the resulting Reserve Bank policy response. Based on this analysis, we select investments for the Fund. These assets are typically held to maturity. We take a conservative approach to credit risk.

Suitable for those investors who

- Require monthly income distributions
- Are highly risk-averse but seek returns higher than bank deposits
- Need a short-term investment account

Minimum investment amounts

Minimum lump sum per investor account: R20 000
 Additional lump sum: R500
 Minimum debit order*: R500

*Only available to South African residents.

Annual management fee and total expense ratio (TER)

A fixed fee of 0.25% p.a. excl. VAT

The annual management fee is included in the TER. The TER is a measure of the actual expenses incurred by the Fund over a 12 month period. Since Fund returns are quoted after deduction of these expenses, the TER should not be deducted from the published returns (refer to page 2 for further information).

1. The current benchmark is the Alexander Forbes Short Term Fixed Interest (STeFI) Composite Index. Since inception to 31 March 2003, the benchmark was the Alexander Forbes 3-Month Deposit Index. From 1 April 2003 to 31 October 2011 the benchmark was the Domestic Fixed Interest Money Market Collective Investment Scheme sector excluding the Allan Gray Money Market Fund, performance as calculated by Allan Gray as at 30 September 2013.

2. This is based on the latest numbers published by I-Net Bridge as at 31 August 2013.

TER breakdown for the year ending 30 June 2013	%
Annual management fee	0.25
Other costs including trading costs	0.01
VAT	0.04
Total expense ratio	0.30

Fund manager quarterly commentary as at 30 September 2013

Interest rates were fairly stable over the past quarter compared to the June sell-off. Rates have rallied a little from the high of late August, but the market is still pricing in a 0.5% rate hike over the next year.

The Reserve Bank's Monetary Policy Committee (MPC) is definitely more cautious in its inflation outlook, noting the risks are to the upside. If the inflation rate continues to escalate from the current 6.4%, the MPC will be forced to take some action. It is important for investor confidence that the Reserve Bank is seen to be monitoring inflation closely and taking action if necessary.

Our base case assumption is that the rand will continue to weaken as global interest rates rise. Rand weakness, together with wage increases of about 8%, means the inflation rate is unlikely to fall back within the target band soon. We therefore expect interest rates to increase and prefer floating rate notes.

People often become used to the status quo and fail to look at the historic norms to add context. The repo rate has averaged 8.7% since January 2000, over the same period the inflation rate averaged 5.8%. A rate of 8.7% seems a very long way from the current 5%, but is important to remember that this is just the average when looking at the probabilities of various outcomes.

Disclaimer

Permissible deductions may include management fees, brokerage, STT, auditor's fees, bank charges and trustee fees. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. The Fund may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Allan Gray Unit Trust Management (RF) Proprietary Limited ("the Company") is a member of the Association for Savings & Investment SA (ASISA). Allan Gray Proprietary Limited, an authorised financial services provider, is the appointed investment manager of the Company. The Company is incorporated and registered under the laws of South Africa and is supervised by the Financial Services Board. The Company has been approved by the Regulatory Authority of Botswana to market its unit trusts in Botswana, however it is not supervised or licensed in Botswana.

Unit price

Unit trust prices are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any permissible deductions from the portfolio divided by the number of units in issue. Forward pricing is used and Fund valuations take place at approximately 16:00 each business day. Purchase and redemption requests must be received by the manager by 14:00 each business day to receive that day's price.

The Fund aims to maintain a constant price of 100 cents per unit. The total return to the investor is primarily made up of interest received but may also include any gain or loss made on any particular instrument held. In most cases this will have the effect of increasing or decreasing the daily yield, but in some cases, for example in the event of a default on the part of an issuer of any instrument held by the fund, it can have the effect of a capital loss. Such losses will be borne by the Fund and its investors and in order to maintain a constant price of 100 cents per unit, investors' unit holdings will be reduced to the extent of such losses.

Compliance with Regulation 28

The Fund is managed to comply with Regulation 28 of the Pension Funds Act. Exposures in excess of the limits will be corrected immediately, except where due to a change in the fair value or characteristic of an asset, e.g market value fluctuations, in which case they will be corrected within a reasonable time period. Allan Gray Unit Trust Management (RF) Proprietary Limited does not monitor compliance by retirement funds with section 19(4) of the Pension Funds Act (item 6 of Table 1 to Regulation 28).

Fees

A schedule of fees, charges and maximum commissions is available on request from the manager. Commission and incentives may be paid and if so, would be included in the overall costs.

TER

The Total Expense Ratio (TER) is the percentage of the Fund's average assets under management that has been used to pay the Fund's operating expenses over the past year. The TER includes the annual management fees that have been charged (both the fee at benchmark and any performance component charged), trading costs (including brokerage, STT, STRATE and insider trading levy), VAT and other expenses. Since unit trust expenses vary, the current TER cannot be used as an indication of future TERs. All Allan Gray performance figures are quoted after the deduction of costs incurred within the Fund so the TER is not a new cost. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. Instead, when investing, the investment objective of the Fund should be aligned with the investor's objective and compared against the performance of the Fund. TERs should then be used to evaluate whether the Fund performance offers value for money.

Performance

Collective Investment Schemes in Securities (unit trusts) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to the future. Performance figures are from Allan Gray Proprietary Limited and are for lump sum investments with income distributions reinvested.
