Commentary

The Fund invests in a portfolio of equities and substantially reduces stockmarket risk by using equity derivatives. As a result, the Fund's return should not be correlated with equity markets but is rather dependent on the ability of the Fund's equity portfolio to outperform its underlying benchmark equity index. The equity portfolio continues to be overweight in South African industrial consumer and gold shares. The Fund has also continued to increase its exposure to selected non-gold resource shares. The Fund remains underweight in financial shares as there is considered to be better value elsewhere in the market.

Unit trusts are medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to the future. Unit trust prices are calculated on a net asset value basis, which is the total value of all assets in the portfolio including any income accrual and less any permissible deductions from the portfolio. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. A schedule of fees and charges and maximum commissions is available from the management company/scheme. Commission and incentives may be paid and if so, would be included in the overall costs. Forward pricing is used. Allan Gray Unit Trust Management Limited is a member of the ACI.
