Commentary

The Fund invests in a portfolio of equities and substantially reduces stockmarket risk by using equity derivatives. As a result, the Fund's return should not be correlated with equity markets but is rather dependent on the level of short-term interest rates and the ability of the Fund's equity portfolio to outperform its underlying benchmark equity index. The Fund continues to increase its weight in selected banking shares which have become relatively more attractive. With short-term interest rates having fallen, the interest rate dependent portion of returns is expected to be lower.

Unit trusts are medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to the future. Unit trust prices are calculated on a net asset value basis, which is the total value of all assets in the portfolio including any income accrual and less any permissible deductions from the portfolio. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. A schedule of fees and charges and maximum commissions is available from the management company/scheme. Commission and incentives may be paid and if so, would be included in the overall costs. Forward pricing is used. Allan Gray Unit Trust Management Limited is a member of the ACI.
