Allan Gray Optimal Fund

Fund manager:	Ruan Stander
Inception date:	1 October 2002
Class:	A

Fund description

The Fund invests mainly in selected shares and it uses exchange-traded derivative contracts on stock market indices to substantially reduce its net equity exposure to within a range of 0-20%. As a result, the Fund's return depends on the level of short-term interest rates (implicit in the pricing of the sold futures contracts) and the performance of the Fund's selected shares relative to the stock market index. The Fund's return is therefore unlikely to be correlated with equity market returns. In addition, a portion of the Fund is typically invested in cash and margin deposits.

ASISA unit trust category:

South African - Multi Asset - Low Equity

Fund objective and benchmark

The Fund aims to provide investors with long-term positive returns higher than those available in the money market sector, irrespective of stock market returns. The Fund's benchmark is the daily interest rate as supplied by FirstRand Bank Limited.

How we aim to achieve the Fund's objective

The Fund invests in selected shares and seeks to substantially reduce stock market risk by selling exchange-traded equity index derivatives. The selected share portfolio is derived from our thorough research process, but the selection of equities in this Fund may differ from that in the other Allan Gray funds by more closely resembling the composition of the indices on which the derivatives contracts are based. The deviation of the Fund's selected share portfolio from the benchmark indices is restricted and closely monitored. This does not eliminate the risk of loss should the selected equities underperform.

Suitable for those investors who

- Seek steady absolute (i.e. positive) returns regardless of stock market trends
- Require a high degree of capital stability
- Wish to invest in a product that offers uncorrelated returns relative to shares or bonds as a 'building block' in a diversified multi-asset class portfolio

Minimum investment amounts

Minimum lump sum per investor account:	R20 000
Additional lump sum:	R500
Minimum debit order*:	R500
*Only available to investors with a South African bank account.	

Annual management fee and total expense ratio (TER)

The fee rate is calculated daily by comparing the Fund's total performance to that of the benchmark.

Fee for performance equal to the Fund's benchmark: 1.00% p.a. excl. VAT

The Fund is first required to recover any underperformance before a fee higher than the fee for performance equal to the benchmark can be charged. This is known as a high watermark. If the Fund's performance is above its previous high watermark, we add 0.2% to the fee for each percentage of performance above the high watermark. The fee is uncapped.

The annual management fee is included in the TER. The TER is a measure of the actual expenses incurred by the Fund over a 12 month period. Since

 The daily interest rate as supplied by FirstRand Bank Limited (source: FirstRand Bank), performance as calculated by Allan Gray as at 31 March 2015.

2. This is based on the latest numbers published by INET BFA as at 28 February 2015.

 Maximum percentage decline over any period. The maximum drawdown occurred from 25 February 2003 to 27 March 2003. Drawdown is calculated on the total return of the Fund (i.e. including income).
The percentage of calendar months in which the Fund produced a positive monthly return since

inception.

The standard deviation of the Fund's monthly return. This is a measure of how much an investment's return varies from its average over time.

Fund returns are quoted after deduction of these expenses, the TER should not be deducted from the published returns (refer to page 2 for further information).

Performance fees	1.31
Other costs including trading costs	0.12
VAT	0.32
Total expense ratio	2.75

ALLANGRAY

Allan Gray Optimal Fund

Fund manager quarterly commentary as at 31 March 2015

The Fund had a good first quarter, returning 3.9%. Readers will recall that we had three key positions at the end of 2014:

- 1) A positive exposure to banks and a negative exposure to mines
- 2) A positive exposure to British American Tobacco (BAT) and a negative exposure to mobile networks
- 3) A positive exposure to Sasol and a negative exposure to Richemont

Banks have substantially outperformed mines over the last quarter. However, we believe that banks are still reasonably priced on conservative accounting earnings, while mines tend to have long-term cycles in profitability. The historical boom in Chinese construction saw mines ramping up supply – a process that is hard to reverse once in force. In the context of slowing demand, the down cycle could last for a number of years.

The second position mentioned above still holds. In some respects these companies are opposites, with BAT growing earnings with price increases, while the mobile networks need to invest in capacity to offset declining prices. We believe that declining prices, revenue and operating profits are not fully priced in for the mobile networks; on the other hand, BAT offers a low-risk and growing stream of free cash flow.

The third position has also been maintained. Despite operating in different sectors, Sasol and Richemont have much in common. Both companies exhibit severe profit cyclicality yet historically have managed to grow earnings faster than the market and, in years of normal profit, are able to deliver an attractive return on shareholder equity. Last year could be seen as a strong year for both companies. Richemont earned high margins after strong growth in sales to Chinese customers and Sasol benefited from a high rand oil price. More recently, Sasol has come under pressure as a result of the falling oil price and investors are only willing to pay seven times earnings for Sasol compared to 21 times for Richemont. It is not clear how long the down cycle in oil will last or how severe the next down cycle will be for Richemont, but the price disparity creates much room for different outcomes.

A new position in JD Group (JDG) was acquired during the quarter. JDG is the dominant furniture retailer in South Africa and is majority owned by Steinhoff. The investment case for JDG is centred on a number of points. Firstly, there is potential to restructure the business, assembled by acquisition over the years, to make it more efficient. Steinhoff has a great track record at restructuring retail businesses around the world. Secondly, JDG's largest competitor, Ellerines, is in liquidation, which should result in reduced competition. Thirdly, the lending business is being sold to RCS – reducing the probability of a substantial loss to shareholders. Lastly, the company is not trading on a high multiple.

Disclaimer

The Fund may be closed to new investments at any time in order to be managed in accordance with its mandate. Permissible deductions may include management fees, brokerage, STT, auditor's fees, bank charges and trustee fees. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. The Fund may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. The FTSE/JSE All Share Index is calculated by FTSE International Limited ('FTSE') in conjunction with the JSE Limited ('JSE') in accordance with standard criteria. The FTSE/ JSE Alf Share Index is calculated by FTSE International Limited ('FTSE') in Conjunction with the JSE Limited ('JSE') in accordance with standard criteria. The FTSE/ JSE Alf Share Index values and constituent lists vests in FTSE and the JSE. All copyright subsisting in the FTSE/JSE All Share Index values and constituent lists vests in FTSE and the JSE. All their rights are reserved. Allan Gray Unit Trust Management (RF) Proprietary Limited ("the Company") is a member of the Association for Savings & Investment SA (ASISA). Allan Gray Proprietary Limited, an authorised financial services provider, is the appointed investment manager of the Company. The Company is incorporated and registered under the laws of South Africa and is supervised by the Financial Services Board. The Company has been approved by the Regulatory Authority of Botswana to market its unit trusts in Botswana, however it is not supervised or licensed in Botswana.

Unit price

Unit trust prices are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any permissible deductions from the portfolio divided by the number of units in issue. Forward pricing is used and Fund valuations take place at approximately 16:00 each business day. Purchase and redemption requests must be received by the manager by 14:00 each business day to receive that day's price.

Fees

A schedule of fees, charges and maximum commissions is available on request from the manager. Commission and incentives may be paid and if so, would be included in the overall costs.

TER

The total expense ratio (TER) is the percentage of the Fund's average assets under management that has been used to pay the Fund's operating expenses over the past year. The TER includes the annual management fees that have been charged (both the fee at benchmark and any performance component charged), trading costs (including brokerage, STT, STRATE and insider trading levy), VAT and other expenses. Since unit trust expenses vary, the current TER cannot be used as an indication of future TERs. All Allan Gray performance figures are quoted after the deduction of costs incurred within the Fund so the TER is not a new cost. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. Instead, when investing, the investment objective of the Fund should be aligned with the investor's objective and compared against the performance of the Fund. TERs should then be used to evaluate whether the Fund performance offers value for money.

Performance

Collective Investment Schemes in Securities (unit trusts) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to the future. Performance figures are from Allan Gray Proprietary Limited and are for lump sum investments with income distributions reinvested.
