Commentary

Given the Fund's aim of seeking to provide a high level of capital stability, the exposure to equities is currently low and focussed on shares which offer the prospect of higher than average future dividends. We believe that many South African industrial shares are trading on attractive multiples on depressed earnings. The Fund therefore continues to be overweight in Industrial shares which are offering very attractive dividend yields with good growth prospects. The Fund's recent quarterly report, which is available by e-mail or via the website, describes in more detail our investment outlook.

Unit trusts are generally medium to long term investments. The value of units may go down as well as up and past performance is not necessarily a guide to the future. Unit trusts are traded at ruling prices. A schedule of fees and charges and maximum commissions is available on request from the company/scheme. Commission and incentives may be paid and if so, would be included in the overall costs.
