Commentary

The Fund's aim is to provide a high level of capital stability. As a result the Fund has a low equity exposure. With the decline in equity markets, one however has the opportunity to marginally increase the exposure as attractive opportunities present themselves. With the strengthening of the Rand some of these opportunities are amongst recourse shares that have declined significantly. The Fund's share portfolio continues to have a high exposure in domestic industrial shares, which offer very attractive dividend yields. With the strength of the Rand, the current year's earnings should be subdued, but these companies have very good long-term growth prospects.

Unit trusts are medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to the future. Unit trust prices are calculated on a net asset value basis, which is the total value of all assets in the portfolio including any income accrual and less any permissible deductions from the portfolio. A schedule of fees and charges and maximum commissions is available from the management company/scheme. Commission and incentives may be paid and if so, would be included in the overall costs. Forward pricing is used. Member of the AUT.
