

Fund description and summary of investment policy

The Fund is managed in broadly the same way as the Allan Gray Balanced Fund. It was created specifically for use in tax-free accounts and can only be accessed through these products. The Fund invests in a mix of shares, bonds, property, commodities and cash. The Fund can invest a maximum of 45% offshore. The Fund typically invests the bulk of its foreign allowance in a mix of funds managed by Orbis Investment Management Limited, our offshore investment partner. The maximum net equity exposure of the Fund is 75% and we may use exchange-traded derivative contracts on stock market indices to reduce net equity exposure from time to time. The Fund is managed to comply with the investment limits governing retirement funds. Returns are likely to be less volatile than those of an equity-only fund.

ASISA unit trust category: South African – Multi Asset – High Equity

Fund objective and benchmark

The Fund aims to create long-term wealth for investors within the constraints governing retirement funds. It aims to outperform the average return of similar funds without assuming any more risk. The Fund's benchmark is the market value-weighted average return of funds in the South African – Multi Asset – High Equity category (excluding Allan Gray funds).

How we aim to achieve the Fund's objective

We seek to buy shares at a discount to their intrinsic value. We thoroughly research companies to assess their intrinsic value from a long-term perspective. This long-term perspective enables us to buy shares which are shunned by the stock market because of their unexciting or poor short-term prospects, but which are relatively attractively priced if one looks to the long term. If the stock market offers few attractive shares we may increase the Fund's weighting to alternative assets such as bonds, property, commodities and cash, or we may partially hedge the Fund's stock market exposure. By varying the Fund's exposure to these different asset classes over time, we seek to enhance the Fund's long-term returns and to manage its risk. The Fund's bond and money market investments are actively managed.

Suitable for those investors who

- Seek steady long-term capital growth
- Are comfortable with taking on some risk of market fluctuation and potential capital loss, but typically less than that of an equity fund
- Wish to invest in a tax-free investment account
- Typically have an investment horizon of at least three years

Maximum investment amounts

Maximum lump sum per investor account	R36 000
Lifetime maximum	R500 000
Maximum debit order*	R3 000

*Only available to investors with a South African bank account.

Class	A

1. The market value-weighted average return of funds in the South African – Multi Asset – High Equity category (excluding Allan Gray funds). Source: Morningstar, performance as calculated by Allan Gray as at 30 June 2025.
2. CPI inflation has been calculated based on the most recent rebased values from Stats SA, reflecting the data as at 31 May 2025 (source: IRESS).
3. Maximum percentage decline over any period. The maximum drawdown occurred from 20 January 2020 to 23 March 2020 and maximum benchmark drawdown occurred from 20 January 2020 to 23 March 2020. Drawdown is calculated on the total return of the Fund/benchmark (i.e. including income).
4. The percentage of calendar months in which the Fund produced a positive monthly return since inception.
5. The standard deviation of the Fund's monthly return. This is a measure of how much an investment's return varies from its average over time.
6. These are the highest or lowest consecutive 12-month returns since inception. This is a measure of how much the Fund and the benchmark returns have varied per rolling 12-month period. The Fund's highest annual return occurred during the 12 months ended 31 March 2021 and the benchmark's occurred during the 12 months ended 31 March 2021. The Fund's lowest annual return occurred during the 12 months ended 31 March 2020 and the benchmark's occurred during the 12 months ended 31 March 2020. All rolling 12-month figures for the Fund and the benchmark are available from our Client Service Centre on request.

Fund history

This Fund is managed in broadly the same way as the Allan Gray Balanced Fund. It was created specifically for use in tax-free accounts. Refer to the Allan Gray Balanced Fund factsheet for a history of the Allan Gray Balanced Fund since its inception on 1 October 1999.

Meeting the Fund objective

The Fund aims to create long-term wealth for investors within the constraints governing retirement funds. It aims to outperform the average return of similar funds without assuming any more risk. The Fund experiences periods of underperformance in pursuit of this objective. Since inception and over the latest five-year period, the Fund has outperformed its benchmark.

Income distributions for the last 12 months

To the extent that income earned in the form of dividends and interest exceeds expenses in the Fund, the Fund will distribute any surplus biannually.	31 Dec 2024	30 Jun 2025
Cents per unit	17.6520	21.6692

Annual management fee

A fixed fee of 1.25% p.a. excl. VAT.

Allan Gray charges this fee based on the net asset value of the Fund excluding the portion invested in Orbis funds. Orbis charges fixed fees within the Orbis funds that the Fund invests in. Orbis pays a marketing and distribution fee to Allan Gray.

Total expense ratio (TER) and transaction costs

The annual management fees charged by both Allan Gray and Orbis are included in the TER. The TER is a measure of the actual expenses incurred by the Fund over a one and three-year period (annualised). Since Fund returns are quoted after deduction of these expenses, the TER should not be deducted from the published returns (refer to page 4 for further information). Transaction costs are disclosed separately.

8. Including currency hedges.

9. The Fund can invest a maximum of 45% offshore. Market movements may periodically cause the Fund to move beyond these limits. This must be corrected within 12 months.

Note: There may be slight discrepancies in the totals due to rounding.

Since inception, the Fund's month-end net equity exposure has varied as follows:

Minimum	57.5% (February 2016)
Average	64.3%
Maximum	72.5% (May 2021)

For the quarter, the FTSE/JSE All Share Index (ALSI) returned 10.2%, the FTSE/JSE All Bond Index returned 5.9% and the Fund returned 8.2%. If that was all you knew, you might think it was a relatively benign quarter, but uneventful it was not.

The quarter began with "Liberation Day" on 2 April when President Trump surprised markets with the degree and severity with which he proposed imposing import tariffs on every country that the US trades with. Even territories uninhabited by humans, such as the Heard and McDonald Islands, were threatened with tariffs. The market reaction was swift, and by 7 April, the ALSI was down 7.0% for the quarter in rands. Offshore, in US dollars, the S&P 500 was down 9.8%, while the MSCI World Index was down 9.9%.

When the US bond market began to buckle, President Trump walked back many of the proposed tariffs, either through revised agreements or 90-day pauses. Within weeks, markets had forgotten the panic of early April, continuing their upward trajectory and largely ignoring the future risk of elevated tariffs on global trade and gross domestic product (GDP).

Domestically, tensions remained elevated in the government of national unity, as the Budget was revised a third time and finally passed in May, with the proposed VAT increase abandoned. Where exactly the SA government will source the funds to finance our growing budget deficit is not entirely clear.

The quarter ended with the already tense situation in the Middle East reaching boiling point, as both Israel and the US bombed Iran, and Iran responded with missile strikes of their own. At quarter end, the countries had entered into a fragile ceasefire agreement.

Against this backdrop, we continue to do what we have always done: ignore short-term noise, and invest in assets we believe offer a margin of safety and potential for long-term outperformance. To the extent that the short-term market volatility created opportunities over the quarter to pick up previously expensive assets on the cheap, we looked to capitalise on those.

Positioning

Our positioning remained largely unchanged over the quarter. The direct offshore exposure of the Fund was 37%. However, if you include the dual-listed businesses that make the majority of their money offshore, the foreign exposure of the Fund was north of 50% on a look-through basis.

The three largest share positions in the Fund, namely British American Tobacco, AB InBev, and Naspers and Prosus, remain unchanged.

British American Tobacco: Continued volume declines in traditional cigarettes, slower-than-expected growth in vape products and concerns over the US regulatory environment continue to weigh on sentiment. However, we believe the market is overly focused on these elements and underappreciates British American Tobacco's resilient cashflows, attractive dividend yield and its rapidly growing Velo product (tobacco-free modern oral). The share trades at a significant discount to intrinsic value and, in our view, offers compelling long-term return prospects.

AB InBev: The world's largest brewer has performed well amid a challenging consumer environment. Despite inflationary pressure and demand challenges in key geographies, AB InBev's cost discipline, pricing power and dominant market positions support earnings growth. Investors remain sceptical due to the company's debt burden and skew to emerging markets, yet we believe the deleveraging trajectory is intact and underappreciated. The valuation remains undemanding, and we are comfortable with our continued exposure.

Naspers and Prosus: Capital allocation has long been a source of frustration for shareholders in Naspers and Prosus. In recent years, this has improved – most notably via the value unlock through their ongoing share repurchase programme which is funded by Tencent share sales. They continue to trade at a material discount to their key holding in Tencent, which in itself we think is attractive and continues to deliver solid results. However, the regulatory and geopolitical risk around Tencent is non-zero, and for us, it therefore becomes about managing position size. We believe the current exposure is appropriate given the idiosyncratic and hard-to-quantify geopolitical risk.

As all these shares have rallied throughout the year, we have been trimming our positions.

Offshore, our partner, Orbis, has delivered excellent year-to-date results despite the continued underweight to US technology shares. While we remain cautious on index-level valuations at both Allan Gray and Orbis, we do hold select US exposure – favouring companies with strong balance sheets, durable competitive advantages and reasonable valuations. Where valuations do not offer a margin of safety, Orbis has shown the discipline to rotate into less crowded areas of the market, and continues to see much greater value outside the US than within it.

Looking ahead

We do not attempt to predict short-term market moves or macroeconomic surprises. Even if we did, we don't think we'd be any good at it. Instead, we focus on identifying assets with robust fundamentals trading at attractive prices. In uncertain environments, we believe this long-term orientation, underpinned by valuation discipline and a contrarian mindset, is essential to preserving and growing our clients' wealth.

During the quarter, we added to Glencore and reduced our exposure to Gold Fields.

Information and content

The information in and content of this publication are provided by Allan Gray as general information about the company and its products and services. Allan Gray does not guarantee the suitability or potential value of any information or particular investment source. The information provided is not intended to, nor does it constitute financial, tax, legal, investment or other advice. Before making any decision or taking any action regarding your finances, you should consult a qualified financial adviser. Nothing contained in this publication constitutes a solicitation, recommendation, endorsement or offer by Allan Gray; it is merely an invitation to do business. Allan Gray has taken and will continue to take care that all information provided, in so far as this is under its control, is true and correct. However, Allan Gray shall not be responsible for and therefore disclaims any liability for any loss, liability, damage (whether direct or consequential) or expense of any nature whatsoever which may be suffered as a result of or which may be attributable, directly or indirectly, to the use of or reliance on any information provided. Allan Gray is an authorised financial services provider.

Management Company

Allan Gray Unit Trust Management (RF) (Pty) Ltd (the "Management Company") is registered as a management company under the Collective Investment Schemes Control Act 45 of 2002, in terms of which it operates unit trust portfolios under the Allan Gray Unit Trust Scheme, and is supervised by the Financial Sector Conduct Authority (FSCA). The Management Company is incorporated under the laws of South Africa and has been approved by the regulatory authority of Botswana to market its unit trusts in Botswana, however, it is not supervised or licensed in Botswana. Allan Gray (Pty) Ltd (the "Investment Manager"), an authorised financial services provider, is the appointed investment manager of the Management Company and is a member of the Association for Savings & Investment South Africa (ASISA). The trustee/custodian of the Allan Gray Unit Trust Scheme is Rand Merchant Bank, a division of FirstRand Bank Limited. The trustee/custodian can be contacted at RMB Custody and Trustee Services: Tel: +27 (0)11 301 6335 or www.rmb.co.za.

Performance

Collective investment schemes in securities (unit trusts or funds) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to future performance. Movements in exchange rates may also cause the value of underlying international investments to go up or down. The Management Company does not provide any guarantee regarding the capital or the performance of the Fund. Performance figures are provided by the Investment Manager and are for lump sum investments with income distributions reinvested. Actual investor performance may differ as a result of the investment date, the date of reinvestment and dividend withholding tax.

Fund mandate

Funds may be closed to new investments at any time in order to be managed according to their mandates. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. The funds may borrow up to 10% of their market value to bridge insufficient liquidity.

Unit price

Unit trust prices are calculated on a net asset value basis, which is the total market value of all assets in the Fund, including any income accruals and less any permissible deductions from the Fund, divided by the number of units in issue. Forward pricing is used and fund valuations take place at approximately 16:00 each business day. Purchase and redemption requests must be received by the Management Company by 14:00 each business day to receive that day's price. Unit trust prices are available daily on www.allangray.co.za.

Fees

Permissible deductions may include management fees, brokerage, securities transfer tax, auditor's fees, bank charges and trustee fees. A schedule of fees, charges and maximum commissions is available on request from Allan Gray. For more information about our annual management fees, refer to the [frequently asked questions](#), available via the Allan Gray website.

Compliance with Regulation 28

The Fund is managed to comply with Regulation 28 of the Pension Funds Act 24 of 1956 (the "Pension Funds Act"). Exposures in excess of the limits will be corrected immediately, except where due to a change in the fair value or characteristic of an asset, e.g. market value fluctuations, in which case they will be corrected within the prescribed regulatory time period. The Management Company does not monitor compliance by retirement funds with section 19(4) of the Pension Funds Act (item 6 of Table 1 to Regulation 28).

Total expense ratio (TER) and transaction costs

The total expense ratio (TER) is the annualised percentage of the Fund's average assets under management that has been used to pay the Fund's actual expenses over the past one- and three-year periods.

The TER includes the annual management fees that have been charged (both the fee at benchmark and any Minimum disclosure document and quarterly general investors' report **Issued:** 10 July 2025

performance component charged), VAT and other expenses like audit and trustee fees. Transaction costs (including brokerage, securities transfer tax, Share Transactions Totally Electronic (STRATE) and FSCA Investor Protection Levy and VAT thereon) are shown separately. Transaction costs are necessary costs in administering the Fund and impact Fund returns. They should not be considered in isolation as returns may be impacted by many other factors over time, including market returns, the type of financial product, the investment decisions of the investment manager, and the TER. Since Fund returns are quoted after the deduction of these expenses, the TER and transaction costs should not be deducted again from published returns. As unit trust expenses vary, the current TER cannot be used as an indication of future TERs. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. Instead, when investing, the investment objective of the Fund should be aligned with the investor's objective and compared against the performance of the Fund. The TER and other funds' TERs should then be used to evaluate whether the Fund performance offers value for money. The sum of the TER and transaction costs is shown as the total investment charge (TIC).

Information for investors in the tax-free investment account

The Allan Gray Tax-Free Investment Account is administered by Allan Gray Investment Services (Pty) Ltd, an authorised administrative financial services provider, and underwritten by Allan Gray Life Ltd, an insurer licensed to conduct investment-linked life insurance business as defined in the Insurance Act 18 of 2017. The underlying investment options of the Allan Gray individual products are portfolios of collective investment schemes in securities (unit trusts or funds).

Fund description and summary of investment policy

The Fund invests in a mix of South African interest-bearing securities. These securities can be issued by government, parastatals, corporates and banks. The Fund’s weighted average modified duration is limited to a maximum of two. Returns are likely to be less volatile than those of traditional income and bond funds, but more volatile than those of money market funds. The Fund is managed to comply with the investment limits governing retirement funds.

ASISA unit trust category: South African – Interest Bearing – Short Term

Fund objective and benchmark

The Fund aims to generate returns higher than bank deposits and traditional money market funds, while maintaining capital stability and low volatility. The Fund’s benchmark is the Alexander Forbes Short Term Fixed Interest (STeFI) Composite Index.

How we aim to achieve the Fund’s objective

The Fund invests in select South African interest-bearing securities providing an income yield and a high degree of capital stability. We formulate an interest rate outlook, which is influenced by our inflation outlook and expectations of the resulting Reserve Bank policy response. Based on this analysis, we select securities for the Fund. These will primarily be floating-rate notes, money market instruments and fixed interest paper with a low duration. We take a conservative approach to credit risk, liquidity risk and duration risk.

Suitable for those investors who

- Are risk-averse but seek returns higher than bank deposits and traditional money market funds
- Need a short-term investment account
- Seek a domestic-only interest-bearing ‘building block’
- Require monthly income distributions

Note: There may be slight discrepancies in the totals due to rounding.

President Trump's "Liberation Day" tariff announcement on 2 April, followed by the subsequent threats, reversals and postponements, created a dizzying level of volatility in global financial markets during the second quarter. The S&P 500, as an example, is now back near all-time highs after falling more than 10% in early April. Indeed, at one point during the sell-off, US equities, bonds and the US dollar all weakened in tandem – a rare occurrence in recent financial market history. The US dollar and US bond yields have not fared as well as equities, with both still weaker versus their initial levels. Trump's One Big Beautiful Bill Act, which entrenches his first-term tax cuts together with new tax breaks and increased spending requirements, has added to investor uncertainty. If passed, the bill may increase federal debt by US\$3tn by some estimates (roughly 7% of US GDP) over the next decade. In addition, any positive sentiment attached to the Department of Government Efficiency's anticipated cost savings has quickly faded.

Trump's haphazard approach to policymaking has also induced angst among global central bankers. Most have now adopted a more careful path to further monetary policy easing, given the two-sided risks that tariffs and heightened trade tensions may pose to inflation. Officials at the US Federal Reserve have dialled back their economic growth projections while simultaneously increasing inflation expectations – conditions more akin to stagflation. Ambiguity exists around whether the inflationary impact of tariffs will be a one-off step higher in prices or something more structural as firms manage the increase in input costs. Conversely, the continuing uncertainty may begin to weigh on consumer confidence and planned investment, further impacting prospects for growth. The expectation is for two cuts (or 50 basis points) in the US by year end.

Locally, our Monetary Policy Committee has swung more dovish, lowering the repo rate to 7.25% at its May meeting, with all members voting in favour of the cut. This shift from its previous, more cautious approach may be attributed to several factors. The starting point is relevant given that the policy rate has been restrictive for some time, with the real rate at its highest level since the mid-2000s, a period during which inflation ran significantly higher. In the absence of an exogenous shock, such as a higher oil price, the current inflation outlook is benign, with the latest print at 2.8% – below the band targeted by the South African Reserve Bank (SARB).

The trade surplus, helped by stronger gold and platinum prices, contributes to a stable exchange rate. And as local growth expectations are revised downwards, cost pressures stemming from increased demand are few and far between. Lastly, the passing of the Budget and the continuation of the government of national unity have eased fiscal concerns somewhat, evidenced by government bond yields at their lowest point for the year to date.

The SARB has also introduced the possibility of lowering the inflation objective to 3% versus the previous 3% to 6% band. While discussions between the SARB and National Treasury remain ongoing, the market has cheered the prospect of a new, lower target. Experience elsewhere suggests that once inflation settles down in the 1% to 3% range, it usually stays there. The current band is too high and wide relative to the low prevailing inflation that the SARB wishes to lock in. With administered prices still expected to outpace overall inflation, government support in the form of lower price-linked wage settlements is clearly required.

Fixed-rate exposure was added to the Fund during the quarter on the expectation of a potentially deeper rate-cutting cycle locally. At quarter end, the Fund's annualised yield was 8.6%.

Information and content

The information in and content of this publication are provided by Allan Gray as general information about the company and its products and services. Allan Gray does not guarantee the suitability or potential value of any information or particular investment source. The information provided is not intended to, nor does it constitute financial, tax, legal, investment or other advice. Before making any decision or taking any action regarding your finances, you should consult a qualified financial adviser. Nothing contained in this publication constitutes a solicitation, recommendation, endorsement or offer by Allan Gray; it is merely an invitation to do business. Allan Gray has taken and will continue to take care that all information provided, in so far as this is under its control, is true and correct. However, Allan Gray shall not be responsible for and therefore disclaims any liability for any loss, liability, damage (whether direct or consequential) or expense of any nature whatsoever which may be suffered as a result of or which may be attributable, directly or indirectly, to the use of or reliance on any information provided. Allan Gray is an authorised financial services provider.

Management Company

Allan Gray Unit Trust Management (RF) (Pty) Ltd (the "Management Company") is registered as a management company under the Collective Investment Schemes Control Act 45 of 2002, in terms of which it operates unit trust portfolios under the Allan Gray Unit Trust Scheme, and is supervised by the Financial Sector Conduct Authority (FSCA). The Management Company is incorporated under the laws of South Africa and has been approved by the regulatory authority of Botswana to market its unit trusts in Botswana, however, it is not supervised or licensed in Botswana. Allan Gray (Pty) Ltd (the "Investment Manager"), an authorised financial services provider, is the appointed investment manager of the Management Company and is a member of the Association for Savings & Investment South Africa (ASISA). The trustee/custodian of the Allan Gray Unit Trust Scheme is Rand Merchant Bank, a division of FirstRand Bank Limited. The trustee/custodian can be contacted at RMB Custody and Trustee Services: Tel: +27 (0)11 301 6335 or www.rmb.co.za.

Performance

Collective investment schemes in securities (unit trusts or funds) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to future performance. The Management Company does not provide any guarantee regarding the capital or the performance of the Fund. Performance figures are provided by the Investment Manager and are for lump sum investments with income distributions reinvested. Actual investor performance may differ as a result of the investment date, the date of reinvestment and applicable taxes.

Fund mandate

Funds may be closed to new investments at any time in order to be managed according to their mandates. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. The funds may borrow up to 10% of their market value to bridge insufficient liquidity.

Unit price

Unit trust prices are calculated on a net asset value basis, which is the total market value of all assets in the Fund, including any income accruals and less any permissible deductions from the Fund, divided by the number of units in issue. Forward pricing is used and fund valuations take place at approximately 16:00 each business day. Purchase and redemption requests must be received by the Management Company by 14:00 each business day to receive that day's price. Unit trust prices are available daily on www.allangray.co.za.

Yield

The Fund's gross yield is the estimated weighted average yield-to-maturity of all underlying interest-bearing instruments as at the last day of the month. The one-year TER is deducted from the gross yield to derive a yield net of fund expenses. Actual returns may differ based on changes in market values, interest rates and market factors during the investment period.

Fees

Permissible deductions may include management fees, brokerage, securities transfer tax, auditor's fees, bank charges and trustee fees. A schedule of fees, charges and maximum commissions is available on request from Allan Gray.

Total expense ratio (TER) and transaction costs

The total expense ratio (TER) is the annualised percentage of the Fund's average assets under management that has been used to pay the Fund's actual expenses over the past one- and three-year periods. The TER includes the annual management fees that have been charged (both the fee at benchmark and any performance component charged), VAT and other expenses like audit and trustee fees. Transaction costs (including brokerage, securities transfer tax, Share Transactions Totally Electronic (STRATE) and FSCA Investor Protection Levy and VAT thereon) are shown separately. Transaction costs are necessary costs in administering the Fund and impact Fund returns. They should not be considered in isolation as returns may be impacted by many other factors over time, including market returns, the type of financial product, the investment decisions of the investment manager, and the TER. Since Fund returns are quoted after the deduction of these expenses, the TER and transaction costs should not be deducted again from published returns. As unit trust expenses vary, the current TER cannot be used as an indication of future TERs. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. Instead, when investing, the investment objective of the Fund should be aligned with the investor's objective and compared against the performance of the Fund. The TER and other funds' TERs should then be used to evaluate whether the Fund performance offers value for money. The sum of the TER and transaction costs is shown as the total investment charge (TIC).

Compliance with Regulation 28

The Fund is managed to comply with Regulation 28 of the Pension Funds Act 24 of 1956 (the "Pension Funds Act"). Exposures in excess of the limits will be corrected immediately, except where due to a change in the fair value or characteristic of an asset, e.g. market value fluctuations, in which case they will be corrected within the prescribed regulatory time period. The Management Company does not monitor compliance by retirement funds with section 19(4) of the Pension Funds Act (item 6 of Table 1 to Regulation 28).

FTSE/JSE All Share Index, FTSE/JSE All Bond Index

Fund description and summary of investment policy

The Fund invests in South African interest bearing securities. Securities include national government, parastatal, municipal, corporate bonds and money market instruments. The Fund price is sensitive to interest rate movements because of the long-term nature of the Fund's investments. The duration of the Fund may differ materially from the benchmark. The Fund is managed to comply with investment limits governing retirement funds.

ASISA unit trust category: South African – Interest Bearing – Variable Term

Fund objective and benchmark

The Bond Fund's goal is to deliver returns that exceed inflation and cash over the long term, without taking on undue risk. The Fund's benchmark is the FTSE/JSE All Bond Index.

How we aim to achieve the Fund's objective

We try to balance credit risk, duration risk and liquidity risk when selecting investments. We target total returns for investors rather than trying to mirror the returns of the FTSE/JSE All Bond Index. When we cannot find value in the bond markets, our portfolio will be weighted towards cash to achieve better returns.

Suitable for those investors who

- Seek a bond 'building block' for a diversified multi-asset class portfolio
- Are looking for returns in excess of those provided by money market or cash investments
- Are prepared to accept more risk of capital depreciation than in a money market or cash investment

Fund information on 30 June 2025

Fund size	R9.9bn
Number of units	574 209 886
Price (net asset value per unit)	R11.09
Modified duration	4.9
Gross yield (before fees)	10.1
Class	A

1. FTSE/JSE All Bond Index (source: IRESS), performance as calculated by Allan Gray as at 30 June 2025.
2. CPI inflation has been calculated based on the most recent rebased values from Stats SA, reflecting the data as at 31 May 2025 (source: IRESS).
3. Maximum percentage decline over any period. The maximum drawdown occurred from 27 February 2020 to 24 March 2020 and maximum benchmark drawdown occurred from 26 February 2020 to 23 March 2020. Drawdown is calculated on the total return of the Fund/benchmark (i.e. including income).
4. The percentage of calendar months in which the Fund produced a positive monthly return since inception.
5. The standard deviation of the Fund's monthly return. This is a measure of how much an investment's return varies from its average over time.
6. These are the highest or lowest consecutive 12-month returns since inception. This is a measure of how much the Fund and the benchmark returns have varied per rolling 12-month period. The Fund's highest annual return occurred during the 12 months ended 30 September 2024 and the benchmark's occurred during the 12 months ended 30 September 2024. The Fund's lowest annual return occurred during the 12 months ended 31 January 2016 and the benchmark's occurred during the 12 months ended 31 January 2016. All rolling 12-month figures for the Fund and the benchmark are available from our Client Service Centre on request.

Maximum drawdown ³	-18.9	-19.3	n/a
Percentage positive months ⁴	72.3	69.1	n/a
Annualised monthly volatility ⁵	5.9	7.5	n/a
Highest annual return ⁶	22.0	26.1	n/a
Lowest annual return ⁶	-2.6	-5.6	n/a

Meeting the Fund objective

Since inception and over the latest 10-year period, the Fund has outperformed its benchmark. Over the latest five-year period, the Fund has underperformed its benchmark. The Fund has provided returns in excess of CPI inflation for all three periods. The Fund aims to take no greater risk than its benchmark. The maximum drawdown and lowest annual return numbers, in the 'Performance net of all fees and expenses' table, show that the Fund has successfully reduced downside risk in periods of negative market returns.

Income distributions for the last 12 months

Actual payout, the Fund distributes quarterly	30 Sep 2024	31 Dec 2024	31 Mar 2025	30 Jun 2025
Cents per unit	26.5758	26.1592	25.4437	26.1703

Asset allocation on 30 June 2025

Maturity profile on 30 June 2025

Note: There may be slight discrepancies in the totals due to rounding.

The Fund has a long history of offering a higher yield but lower modified duration (or interest rate risk) than its benchmark. The prevailing environment that has allowed this unusual dynamic of lower risk and higher yields to exist is that inflation-adjusted cash rates have been extremely high in South Africa for extended periods. This is in part due to the large net funding deficit that our economy needs to fill, which puts pressure on rates, as well as the hawkish nature of the South African Reserve Bank (SARB).

Of late, the SARB has shown a sudden and notable change in both thinking and rhetoric, opening the door for a potential move to an overnight cash rate of 6% (from the current 7.25%) at their last meeting. They argue that this would be underpinned by the move to a 3% inflation target, although, in reality, South Africa's inflation has arrived there without any such formal target in place. This follows a collapse in inflationary drivers in South Africa and a narrowing of the gap in SA versus US inflation. Our thesis for higher global, and in particular US, inflation remains intact given the heightened pressures from defence spending, debt burdens and tariff-related deglobalisation. In South Africa, however, inflationary price drivers have been dampened significantly: The National Energy Regulator of South Africa (NERSA) squashed Eskom's attempt to put through 40% tariff hikes, the Democratic Alliance and other coalition partners pushed back against the VAT increase, the Organization of the Petroleum Exporting Countries (OPEC) has opened the taps on oil supply, and the US dollar index has derated materially following an offshore unwinding of the "US exceptionalism" narrative.

Such a decline in the SA versus offshore inflationary premium (if structural) warrants a lower fair value yield (or a higher fair value price) on our bonds, which has been taken into account in the Fund's positioning. The 20-year SA government bond unwound approximately 75% of the post-GNU rally in the week following "Liberation Day". The Fund added to modified duration in that week, as well as during the yield and spread correction that has taken place since.

Risks still remain elevated, however. South Africa's debt and interest burden is far greater than its history, with a revised debt peak at 77% of GDP that will likely be revised higher, yet again, in the coming months. The GNU remains fragile on a multi-year outlook, and R1tn of SA government bond maturities over the next five years will put pressure on the steepness of the yield curve. The pace of future infrastructure spend and real GDP growth could also be lower than what the market priced for in the exuberance of the post-GNU rally.

In the last quarter, the Fund reduced exposure to floating-rate notes given our expectation for a lower return from cash-like instruments, as well as the recent collapse in bank funding spreads. The Fund has also been adding to fixed-rate duration since the post-Liberation Day sell-off in SA government bonds. As such, the Fund's modified duration gap versus its benchmark is lower than it was previously.

Fund description and summary of investment policy

The Fund invests primarily in a mix of South African interest-bearing securities, with limited exposure to offshore interest-bearing securities. Returns are likely to be less volatile than those of a bond-only fund. The Fund is managed to comply with the investment limits governing retirement funds.

ASISA unit trust category: South African – Multi Asset – Income

Fund objective and benchmark

The Fund aims to generate income and produce returns that are superior to traditional money market funds, while preserving capital and minimising the risk of loss over any one- to two-year period. The Fund's benchmark is the Alexander Forbes Short Term Fixed Interest (STeFI) Composite Index.

How we aim to achieve the Fund's objective

The Fund invests in a broad range of South African interest-bearing securities, such as floating-rate notes, inflation-linked bonds, fixed-rate instruments and money market securities, with limited exposure to offshore interest-bearing securities. It provides investors with income and a high degree of capital stability. We formulate an interest rate outlook, which is influenced by our inflation outlook and expectations of the resulting Reserve Bank policy response. Based on this analysis, we select securities for the Fund. While the Fund can have limited exposure to equities and property, we expect this to occur infrequently and to typically coincide with unusual or extreme points in the valuation cycle. We take a conservative approach to managing the Fund, balancing credit risk, duration risk and liquidity risk when selecting securities.

Suitable for those investors who

- Are risk-averse and require capital preservation over any one- to two-year period
- Seek returns higher than traditional money market funds
- Seek a unit trust that provides an income
- Seek a prudently managed income 'building block'
- Wish to invest in a unit trust that complies with retirement fund investment limits

Maturity profile on 30 June 2025

Note: There may be slight discrepancies in the totals due to rounding.

President Trump's "Liberation Day" tariff announcement on 2 April, followed by the subsequent threats, reversals and postponements, created a dizzying level of volatility in global financial markets during the second quarter. The S&P 500, as an example, is now back near all-time highs after falling more than 10% in early April. Indeed, at one point during the sell-off, US equities, bonds and the US dollar all weakened in tandem – a rare occurrence in recent financial market history. The US dollar and US bond yields have not fared as well as equities, with both still weaker versus their initial levels. Trump's One Big Beautiful Bill Act, which entrenches his first-term tax cuts together with new tax breaks and increased spending requirements, has added to investor uncertainty. If passed, the bill may increase federal debt by US\$3tn by some estimates (roughly 7% of US GDP) over the next decade. In addition, any positive sentiment attached to the Department of Government Efficiency's anticipated cost savings has quickly faded.

Trump's haphazard approach to policymaking has also induced angst among global central bankers. Most have now adopted a more careful path to further monetary policy easing, given the two-sided risks that tariffs and heightened trade tensions may pose to inflation. Officials at the US Federal Reserve have dialled back their economic growth projections while simultaneously increasing inflation expectations – conditions more akin to stagflation. Ambiguity exists around whether the inflationary impact of tariffs will be a one-off step higher in prices or something more structural as firms manage the increase in input costs. Conversely, the continuing uncertainty may begin to weigh on consumer confidence and planned investment, further impacting prospects for growth. The expectation is for two cuts (or 50 basis points) in the US by year end.

Locally, our Monetary Policy Committee has swung more dovish, lowering the repo rate to 7.25% at its May meeting, with all members voting in favour of the cut.

This shift from its previous, more cautious approach may be attributed to several factors. The starting point is relevant given that the policy rate has been restrictive for some time, with the real rate at its highest level since the mid-2000s – a period during which inflation ran significantly higher. In the absence of an exogenous shock, such as a higher oil price, the current inflation outlook is benign, with the latest print at 2.8% – below the band targeted by the South African Reserve Bank (SARB). The trade surplus, helped by stronger gold and platinum prices, contributes to a stable exchange rate. And as local growth expectations are revised downwards, cost pressures stemming from increased demand are few and far between. Lastly, the passing of the Budget and the continuance of the government of national unity have eased fiscal concerns somewhat, evidenced by government bond yields at their lowest point for the year to date.

The SARB has also introduced the possibility of lowering the inflation objective to 3% versus the previous 3% to 6% band. While discussions between the SARB and National Treasury remain ongoing, the market has cheered the prospect of a new, lower target. Experience elsewhere suggests that once inflation settles down in the 1% to 3% range, it usually stays there. The current band is too high and wide relative to the low prevailing inflation that the SARB wishes to lock in. With administered prices still expected to outpace overall inflation, government support in the form of lower price-linked wage settlements is clearly required.

Further fixed-rate exposure was added to the Fund during the quarter on the expectation of a potentially deeper rate-cutting cycle locally. At quarter end, the Fund's annualised yield was 9.0%.

Information and content

The information in and content of this publication are provided by Allan Gray as general information about the company and its products and services. Allan Gray does not guarantee the suitability or potential value of any information or particular investment source. The information provided is not intended to, nor does it constitute financial, tax, legal, investment or other advice. Before making any decision or taking any action regarding your finances, you should consult a qualified financial adviser. Nothing contained in this publication constitutes a solicitation, recommendation, endorsement or offer by Allan Gray; it is merely an invitation to do business. Allan Gray has taken and will continue to take care that all information provided, in so far as this is under its control, is true and correct. However, Allan Gray shall not be responsible for and therefore disclaims any liability for any loss, liability, damage (whether direct or consequential) or expense of any nature whatsoever which may be suffered as a result of or which may be attributable, directly or indirectly, to the use of or reliance on any information provided. Allan Gray is an authorised financial services provider.

Management Company

Allan Gray Unit Trust Management (RF) (Pty) Ltd (the "Management Company") is registered as a management company under the Collective Investment Schemes Control Act 45 of 2002, in terms of which it operates unit trust portfolios under the Allan Gray Unit Trust Scheme, and is supervised by the Financial Sector Conduct Authority (FSCA). The Management Company is incorporated under the laws of South Africa and has been approved by the regulatory authority of Botswana to market its unit trusts in Botswana, however, it is not supervised or licensed in Botswana. Allan Gray (Pty) Ltd (the "Investment Manager"), an authorised financial services provider, is the appointed investment manager of the Management Company and is a member of the Association for Savings & Investment South Africa (ASISA). The trustee/custodian of the Allan Gray Unit Trust Scheme is Rand Merchant Bank, a division of FirstRand Bank Limited. The trustee/custodian can be contacted at RMB Custody and Trustee Services: Tel: +27 (0)11 301 6335 or www.rmb.co.za.

Performance

Collective investment schemes in securities (unit trusts or funds) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to future performance. The Management Company does not provide any guarantee regarding the capital or the performance of the Fund. Performance figures are provided by the Investment Manager and are for lump sum investments with income distributions reinvested. Actual investor performance may differ as a result of the investment date, the date of reinvestment and dividend withholding tax.

Fund mandate

Funds may be closed to new investments at any time in order to be managed according to their mandates. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. The funds may borrow up to 10% of their market value to bridge insufficient liquidity.

Unit price

Unit trust prices are calculated on a net asset value basis, which is the total market value of all assets in the Fund, including any income accruals and less any permissible deductions from the Fund, divided by the number of units in issue. Forward pricing is used and fund valuations take place at approximately 16:00 each business day. Purchase and redemption requests must be received by the Management Company by 14:00 each business day to receive that day's price. Unit trust prices are available daily on www.allangray.co.za.

Yield

The Fund's gross yield is the estimated weighted average yield-to-maturity of all underlying interest-bearing instruments as at the last day of the month. The one-year TER is deducted from the gross yield to derive a yield net of fund expenses. Actual returns may differ based on changes in market values, interest rates and market factors during the investment period.

Fees

Permissible deductions may include management fees, brokerage, securities transfer tax, auditor's fees, bank charges and trustee fees. A schedule of fees, charges and maximum commissions is available on request from Allan Gray.

Total expense ratio (TER) and transaction costs

The total expense ratio (TER) is the annualised percentage of the Fund's average assets under management that has been used to pay the Fund's actual expenses over the past one- and three-year periods. The TER includes the annual management fees that have been charged (both the fee at benchmark and any performance component charged), VAT and other expenses like audit and trustee fees. Transaction costs (including brokerage, securities transfer tax, Share Transactions Totally Electronic (STRATE) and FSCA Investor Protection Levy and VAT thereon) are shown separately. Transaction costs are necessary costs in administering the Fund and impact Fund returns. They should not be considered in isolation as returns may be impacted by many other factors over time, including market returns, the type of financial product, the investment decisions of the investment manager, and the TER. Since Fund returns are quoted after the deduction of these expenses, the TER and transaction costs should not be deducted again from published returns. As unit trust expenses vary, the current TER cannot be used as an indication of future TERs. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. Instead, when investing, the investment objective of the Fund should be aligned with the investor's objective and compared against the performance of the Fund. The TER and other funds' TERs should then be used to evaluate whether the Fund performance offers value for money. The sum of the TER and transaction costs is shown as the total investment charge (TIC).

Compliance with Regulation 28

The Fund is managed to comply with Regulation 28 of the Pension Funds Act 24 of 1956 (the "Pension Funds Act"). Exposures in excess of the limits will be corrected immediately, except where due to a change in the fair value or characteristic of an asset, e.g. market value fluctuations, in which case they will be corrected within the prescribed regulatory time period. The Management Company does not monitor compliance by retirement funds with section 19(4) of the Pension Funds Act (item 6 of Table 1 to Regulation 28).

FTSE/JSE All Share Index, FTSE/JSE All Bond Index

The FTSE/JSE All Share Index and FTSE/JSE All Bond Index are calculated by FTSE International Limited ("FTSE") in conjunction with the JSE Limited ("JSE") in accordance with standard criteria. The FTSE/JSE All Share Index and FTSE/JSE All Bond Index are the proprietary information of FTSE and the JSE. All copyright subsisting in the values and constituent lists of the FTSE/JSE All Share Index and FTSE/JSE All Bond Index vests in FTSE and the JSE jointly. All their rights are reserved.

Fund description and summary of investment policy

The Fund invests in South African money market instruments with a term shorter than 13 months. These instruments can be issued by government, parastatals, corporates and banks. The Fund is managed to comply with regulations governing retirement funds.

While capital losses are unlikely, they can occur if, for example, one of the issuers of an instrument held by the Fund defaults. In this event losses will be borne by the Fund and its investors.

ASISA unit trust category: South African – Interest Bearing – SA Money Market

Fund objective and benchmark

The Fund aims to preserve capital, maintain liquidity and generate a sound level of income. The Fund’s benchmark is the Alexander Forbes Short Term Fixed Interest (STeFI) 3-month Index.

How we aim to achieve the Fund’s objective

The Fund invests in selected money market instruments providing an income yield and a high degree of capital stability. We formulate an interest rate outlook, which is influenced by our inflation outlook and expectations of the resulting Reserve Bank policy response. Based on this analysis, we select investments for the Fund. These assets are typically held to maturity. We take a conservative approach to credit risk.

Suitable for those investors who

- Require monthly income distributions
- Are highly risk-averse but seek returns higher than bank deposits
- Need a short-term investment account

Fund information on 30 June 2025

Fund size	R28.4bn
Number of units	25 136 799 119
Price (net asset value per unit)	R1.00
Monthly yield at month end	0.63
Fund weighted average coupon (days)	80.89
Fund weighted average maturity (days)	103.02
Class	A

- The current benchmark is the Alexander Forbes Short Term Fixed Interest (STeFI) 3-month Index. From inception to 31 March 2003, the benchmark was the Alexander Forbes 3-Month Deposit Index. From 1 April 2003 to 31 October 2011, the benchmark was the Domestic Fixed Interest Money Market Collective Investment Scheme sector excluding the Allan Gray Money Market Fund. From 1 November 2011 to 19 August 2024, the benchmark was the Alexander Forbes Short Term Fixed Interest (STeFI) Composite Index. Performance as calculated by Allan Gray as at 30 June 2025. Source: Bloomberg.
- CPI inflation has been calculated based on the most recent rebased values from Stats SA, reflecting the data as at 31 May 2025 (source: IRESS).
- The percentage of calendar months in which the Fund produced a positive monthly return since inception.
- The standard deviation of the Fund’s monthly return. This is a measure of how much an investment’s return varies from its average over time.
- These are the highest or lowest consecutive 12-month returns since inception. This is a measure of how much the Fund and the benchmark returns have varied per rolling 12-month period. The Fund’s highest annual return occurred during the 12 months ended 31 July 2003 and the benchmark’s occurred during the 12 months ended 31 July 2003. The Fund’s lowest annual return occurred during the 12 months ended 31 October 2021 and the benchmark’s occurred during the 12 months ended 31 October 2021. All rolling 12-month figures for the Fund and the benchmark are available from our Client Service Centre on request.

Meeting the Fund objective

The Fund has preserved capital, maintained liquidity and generated a sound level of income.

Annual management fee

A fixed fee of 0.25% p.a. excl. VAT

Total expense ratio (TER) and transaction costs (updated quarterly)

The annual management fee is included in the TER. The TER is a measure of the actual expenses incurred by the Fund over a one and three-year period (annualised). Since Fund returns are quoted after deduction of these expenses, the TER should not be deducted from the published returns (refer to page 4 for further information). Transaction costs are disclosed separately.

TER and transaction costs breakdown for the 1- and 3-year period ending 30 June 2025	1yr %	3yr %
Total expense ratio	0.29	0.29
Fee for benchmark performance	0.25	0.25
Other costs excluding transaction costs	0.00	0.00
VAT	0.04	0.04

6. Excludes accrued fees.

7. Banks include negotiable certificates of deposit (NCDs), floating-rate notes, fixed-rate notes, and call deposits.

Note: There may be discrepancies in the totals due to rounding.

While savers have enjoyed high real, or inflation-adjusted, cash rates in South Africa for extended periods, of late these spreads have become both notably high and somewhat egregious for net borrowers. In the past several months, the Fund's yield has reached levels in excess of 5% greater than SA inflation. These are spreads that the Fund has not achieved since 2003, and point to the fact that real, or inflation-adjusted, cash rates may be too high.

High nominal interest rates are in part due to the large net funding deficit that our economy needs to fill as well as the hawkish nature of the South African Reserve Bank (SARB). Recently, the SARB has shown a sudden and notable change in both thinking and rhetoric, opening the door for a potential move to an overnight cash rate of 6% (from the current 7.25%) at their last meeting. They argue that this would be underpinned by the move to a 3% national inflation target, although in reality, South Africa's inflation has arrived there without any such formal target in place. This follows a collapse in inflationary drivers in South Africa and a narrowing of the gap in SA versus US inflation to just 0.4%. By contrast, in the five years pre-COVID, South Africa's inflation ran at +3.5% wider than inflation in the US.

Our thesis for higher global, and in particular US, inflation remains intact, given the heightened pressures from defence spending, debt burdens and tariff-related deglobalisation. In South Africa, however, inflationary price drivers have been dampened significantly: The National Energy Regulator of South Africa (NERSA) squashed Eskom's attempt to put through 40% tariff hikes, the Democratic Alliance and other coalition partners pushed back against the VAT increase, the Organization of the Petroleum Exporting Countries (OPEC) has opened the taps on oil supply, and the US dollar index has derated materially following an offshore unwinding of the "US exceptionalism" narrative. Feeding the disinflationary environment on the ground locally has also been a weak SA consumer with subdued demand for goods and services, as well as a flood of cheap Chinese vehicles, steel and manufactured goods into our market. This has both lowered prices and toppled several local industry players who cannot compete.

In the last quarter, the Fund added to its fixed-rate exposure via government Treasury bills in order to lock in higher rates, given the potential for a more aggressive rate-cutting cycle than the SARB previously guided to.

Performance

Collective investment schemes in securities (unit trusts or funds) are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to future performance. The Management Company does not provide any guarantee regarding the capital or the performance of the Fund. Performance figures are provided by the Investment Manager and are for lump sum investments with income distributions reinvested. Actual investor performance may differ as a result of the investment date, the date of reinvestment and applicable taxes.

Fund mandate

Funds may be closed to new investments at any time in order to be managed according to their mandates. Unit trusts are traded at ruling prices and can engage in borrowing and scrip lending. The funds may borrow up to 10% of their market value to bridge insufficient liquidity.

The Allan Gray Money Market Fund is not a bank deposit account

The Fund aims to maintain a constant price of 100 cents per unit. The total return an investor receives is made up of interest received and any gain or loss made on instruments held by the Fund. While capital losses are unlikely, they can occur if, for example, one of the issuers of an instrument defaults. In this event, investors may lose some of their capital. To maintain a constant price of 100 cents per unit, investors' unit holdings will be reduced to the extent of such losses. The yield is calculated according to applicable ASISA standards. Excessive withdrawals from the Fund may place it under liquidity pressure; if this happens, withdrawals may be ring-fenced and managed over a period of time.

Purchase and redemption requests must be received by the Management Company by 11:00 each business day to receive that day's price. Unit trust prices are available daily on www.allangray.co.za.

Fees

Permissible deductions may include management fees, brokerage, securities transfer tax, auditor's fees, bank charges and trustee fees. A schedule of fees, charges and maximum commissions is available on request from Allan Gray.

Total expense ratio (TER) and transaction costs
