

ALLAN GRAY AFRICA EX-SA EQUITY FUND

Fund managers: Andrew Lapping, Nick Ndiritu Inception date: 1 January 2012 Registration number: 45930

Fund description and summary of investment policy

The Fund invests in a focused portfolio of companies with significant business interests in Africa regardless of the location of the stock exchange listing (excluding South Africa). The Fund price is reported in US dollars, but the underlying holdings are denominated in various currencies. Returns are likely to be volatile.

Fund objective and benchmark

The Fund aims to outperform African equity markets over the long term without taking on greater risk of loss. The Fund's benchmark is the Standard Bank Africa Total Return Index. The Fund does not seek to mirror the benchmark but instead may deviate meaningfully from this performance benchmark in pursuit of superior returns. To the extent that its investments differ from those in the benchmark, the Fund faces the risk of underperforming the benchmark.

How we aim to achieve the Fund's objective

We invest in shares that we believe offer superior fundamental value while taking into account risk and return. We research companies and assess their intrinsic value based on long-term fundamentals; we then invest in businesses where our assessment of intrinsic value exceeds the share price by a margin of safety. This approach allows us to identify shares that may be out of favour with the market because of poor near-term prospects, but offer good value over the long term. The Fund's holdings will deviate meaningfully from those in the index both in terms of individual holdings and sector exposure.

Suitable for those investors who

- Seek exposure to African equities
- Are comfortable with stock market and currency fluctuations
- Are prepared to take on the risk of capital loss
- Typically have an investment horizon of more than five years

Minimum investment amounts

Minimum initial investment	US\$50 000
Minimum subsequent investment	US\$1 000

Capacity

The Fund currently has limited capacity. Allan Gray International Proprietary Limited (the 'Investment Manager') may, at its discretion, refuse a subscription or phase a subscription into the Fund over a number of dealing days. The Investment Manager may, at its discretion, limit redemptions to US\$5m or 2.5% of the Fund (whichever is less) per dealing day.

Subscription and redemption charge

Investors are charged 1% when subscribing for Fund shares. Investors may be charged 1% when redeeming Fund shares in the case of significant redemptions. These charges are paid into the Fund to offset the costs associated with the transactions that are borne by the Fund. The Investment Manager may waive these charges if transactions substantially offset one another.

Relative to benchmark return required to reach high watermark: 24.5%.

1. Standard Bank Africa Total Return Index (source: Standard Bank), performance as calculated by Allan Gray as at 30 April 2016. Calculation based on the latest available data as supplied by third parties.
2. Maximum percentage decline over any period. The maximum drawdown occurred from August 2014 to January 2016 and maximum benchmark drawdown occurred from July 2014 to January 2016. Drawdown is calculated on the total return of the Fund/benchmark (i.e. including income).
3. The percentage of calendar months in which the Fund produced a positive monthly return since inception.
4. The standard deviation of the Fund's monthly return. This is a measure of how much an investment's return varies from its average over time.
5. This is the highest or lowest rolling 12-month return the Fund has experienced since inception. The Fund's highest annual return occurred during the 12 months ended 31 May 2013 and the benchmark's occurred during the 12 months ended 30 June 2014. The Fund's lowest annual return occurred during the 12 months ended 31 August 2015 and the benchmark's occurred during the 12 months ended 31 August 2015. All rolling 12-month figures for the Fund and the benchmark are available from the Allan Gray Service Team on request.

ALLAN GRAY AFRICA EX-SA EQUITY FUND

Meeting the Fund objective

The Fund aims to outperform African equity markets (excluding South Africa) over the long term without taking on greater risk of loss. The Fund experiences periods of underperformance in pursuit of this objective. As the Fund is less than five years old it is too early to tell if it has met its objective. However, since inception the Fund has outperformed its benchmark and we are confident that the Fund will meet its objective over the long term.

Income distributions for the last 12 months

To the extent that income earned in the form of dividends and interest exceeds expenses in the Fund, the Fund will distribute any surplus.	31 Dec 2015
Dollars per unit	2.0848

Annual management fee

The management fee consists of a fixed fee and a performance fee component. The fixed fee is charged at a rate of 1% per year. The performance fee is 20% of the extent to which the Fund outperforms the benchmark, after the fixed fee is deducted and subject to the Fund exceeding the 'high watermark'. The high watermark is the maximum ratio the Fund's net asset value per share, including distributions, has achieved relative to the benchmark since the Fund's inception.

Total expense ratio (TER) and Transaction costs

The annual management fee charged is included in the TER. The TER is a measure of the actual expenses incurred by the Fund over a 3-year period (annualised). Since Fund returns are quoted after deduction of these expenses, the TER should not be deducted from the published returns (refer to page 4 for further information). Transaction costs are disclosed separately.

TER and Transaction costs breakdown for the 3-year period ending 31 March 2016	%
Total expense ratio	3.51
Fixed fee	1.00
Performance fees	1.75
Custody fees	0.31
Other costs excluding transaction costs	0.07
VAT	0.38
Transaction costs (including VAT)	0.63
Total investment charge	4.14

ALLAN GRAY

ALLAN GRAY AFRICA EX-SA EQUITY FUND

Fund manager quarterly commentary as at 31 March 2016

The first quarter of the year was particularly volatile. The Fund closed 4.4% down for the quarter, masking substantial intra-quarter moves and sector-specific contributors and detractors.

Amongst the industrials, Eastern Tobacco contributed strongly but this was offset by Delta Corporation's 20% decline. Similarly our Nigerian oil stocks performed well as the oil price recovered to US\$40 per barrel (/bbl), but their contributions were offset by continued weakness in the Nigerian banks. The Fund is exposed to the oil market through its investments in Nigeria's Seplat, as well as indirectly through the Nigerian banks. Sentiment towards the oil market is very poor: commentators who in July 2014 thought the oil price would remain steady above US\$100/bbl are now calling for the price to remain below US\$40/bbl. While we are the first to admit that forecasting commodity prices is extremely difficult, we do have a view on the oil price, which is premised on sustainability and the business cycle.

When the oil price was over US\$100/bbl, oil companies were investing all their operating cash flows and borrowing from very willing capital markets in an effort to grow production as fast as possible. This type of behaviour is usually an indication that the status quo will not last. Two years later we are in a situation where almost all oil companies are generating negative free cash flow despite cutting capital expenditure as fast as they can. Over 90% of US oil companies generated negative free cash flow in 2015 despite the oil price averaging US\$53/bbl compared to today's US\$41/bbl. Furthermore, many US companies realised an oil price well above US\$53/bbl due to hedging gains.

An indication of how capital is being withdrawn from the industry is the number of rigs actively drilling for oil, as reported by oilfield services company, Baker Hughes. In November 2014, 3 670 rigs were drilling around the world; and as of the end of February 2016, this had reduced to 1 761, a 52% decline. Most of the decline was in North America, but the number of rigs drilling in the rest of the world still fell 23%. In time we think the reduction in capital expenditure will manifest itself in a tighter market and higher oil prices. This is despite all the talk of Saudi Arabia and Iran ramping up production.

We currently aren't modelling the oil price returning to its previous highs, but if it does we won't complain. Fortunately Seplat, our largest oil exposure, offers good value at the current oil price and higher prices offer further upside.

The Nigerian stock market is very weak as the naira/US dollar peg is unsustainable and the economy is fragile. Nigerian bank share prices are pricing in a greater than 50% chance of bankruptcy. We think most of the banks will survive and some will thrive as the Nigerian economy is not only about oil. We have taken this opportunity to invest in what we think are quality franchises at very depressed prices. We think these prices more than compensate investors for the currency and economic risks. Again, a higher oil price will help the Nigerian economy but we don't think it is required to make the Nigerian banks very attractive investments.

There were no major position changes in the Fund, but we did initiate a few smaller positions in Egypt and selectively added exposure to Nigerian banks.

Commentary contributed by Andrew Lapping

Notes for consideration

Fund information

The Fund is incorporated and registered under the laws of Bermuda and is supervised by the Bermuda Monetary Authority. The Fund is also listed on, and regulated by, the Bermuda Stock Exchange. The primary custodian of the Fund is Citibank N.A. The custodian can be contacted at 390 Greenwich Street, New York, New York, USA. The Investment Manager, an authorised Financial Services Provider in terms of the Financial Advisory and Intermediary Services Act 37 of 2002, is the appointed investment manager of the Fund. The Investment Manager has appointed Allan Gray Unit Trust Management (RF) Proprietary Limited (the 'Representative') as its representative for the purpose of approval in terms of the Collective Investment Schemes Control Act 45 of 2002. The Representative is incorporated under the laws of South Africa and is supervised by the Financial Services Board ('FSB').

The Fund may be closed to new investments at any time to be managed according to its mandate. Shares in the Fund are traded at ruling prices and the Fund can engage in borrowing and scrip lending. The Fund may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. This report does not constitute a financial promotion, a recommendation, an offer to sell or a solicitation to buy shares in the Fund. Investments in the Fund are made according to the terms and conditions and subject to the restrictions set out in the prospectus. The offering of shares in the Fund may be restricted in certain jurisdictions. Please contact the Allan Gray service team to confirm if there are any restrictions that apply to you.

Performance

Collective Investment Schemes in Securities (unit trusts or mutual funds) are generally medium- to long-term investments. Where annualised performance is mentioned, this refers to the average return per year over the period. The value of shares may go down as well as up and past performance is not necessarily a guide to future performance. Movements in exchange rates may cause the value of underlying international investments to go up or down. Neither the Investment Manager, the Fund nor the Representative provides any guarantee regarding the capital or the performance of the Fund. Performance figures are provided by the Investment Manager and are for lump sum investments with income distributions reinvested. Actual investor performance may differ as a result of the investment date, the date of reinvestment and applicable taxes.

Benchmark data

The Fund's benchmark data is provided by Standard Bank Plc who require that we include the following legal note. The Standard Bank Africa Total Return Index is the proprietary information and registered trademark of Standard Bank Plc. All copyright subsisting in the Standard Bank Africa Total Return Index values and constituent lists vests in Standard Bank Plc. All their rights are reserved.

Share price

Share prices are calculated on a net asset value basis, which is the total market value of all assets in the Fund including any income accruals and less any permissible deductions from the Fund divided by the number of shares in issue. Forward pricing is used. The weekly price of the Fund is normally calculated each Friday. Purchase requests must be received by the Registrar of the Fund (being Citibank Europe plc, Luxembourg Branch) by 17:00 Bermuda time on that dealing day to receive that week's price. Redemption requests must be received by the Registrar of the Fund by 12:00 Bermuda time, on the particular dealing day on which shares are to be redeemed to receive that week's price. Share prices are available on www.allangray.co.za.

Fees and charges

Permissible deductions from the Fund may include management fees, brokerage, Securities Transfer Tax (STT), auditor's fees, bank charges and custody fees. A schedule of fees, charges and maximum commissions is available on request from the Representative.

Total expense ratio (TER) and Transaction costs

The total expense ratio (TER) is the annualised percentage of the Fund's average assets under management that has been used to pay the Fund's actual expenses over the past three years. The TER includes the annual management fees that have been charged (both the fee at benchmark and any performance component charged), VAT and other expenses like audit fees. Transaction trading costs (including brokerage, Securities Transfer Tax [STT] and investor protection levies and VAT thereon where applicable) are shown separately. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER. Since Fund returns are quoted after the deduction of these expenses, the TER and Transaction costs should not be deducted again from published returns. As collective investment scheme expenses vary, the current TER cannot be used as an indication of future TERs. A higher TER ratio does not necessarily imply a poor return, nor does a low TER imply a good return. Instead, when investing, the investment objective of the Fund should be aligned with the investor's objective and compared against the performance of the Fund. The TER and other funds' TERs should then be used to evaluate whether the Fund performance offers value for money. The sum of the TER and Transaction costs is shown as the Total investment charge.

Foreign exposure

There are significant risks involved in investing in shares listed in the Fund's universe of emerging and developing countries including liquidity risks, sometimes aggravated by rapid and large outflows of 'hot money' and capital flight, concentration risk, currency risks, political and social instability, the possibility of expropriation, confiscatory taxation or nationalisation of assets and the establishment of foreign exchange controls which may include the suspension of the ability to transfer currency from a given country.

The Fund can use derivatives to manage its exposure to stock markets, currencies and/ or interest rates and this exposes the Fund to contractual risk. Contractual risk includes the risk that a counterparty will not settle a transaction according to its terms and conditions because of a dispute over the terms of the contract (whether or not bona fide) or because of a credit or liquidity problem, causing the Fund to suffer a loss. Such contract counterparty risk is accentuated for contracts with longer maturities where events may intervene to prevent settlement, or where the Fund has concentrated its transactions with a single or small group of counterparties. Borrowing, leveraging, and trading securities on margin will result in interest charges and, depending on the amount of trading activity, such charges could be substantial. The low margin deposits normally required in futures and forward trading, which the Fund may utilise, permit a high degree of leverage. As a result, a relatively small price movement in a futures or forward contract may result in immediate and substantial losses to the investor.

Additional information

You can obtain additional information about the Fund, including copies of the prospectus, application forms and the annual report, free of charge, by contacting the Allan Gray service team, at +353 1 622 4716 or by email at AGclientservice@citi.com.
