

**Fund description and summary of investment policy**

The Fund invests in a focused portfolio of companies with significant business interests in Africa regardless of the location of the stock exchange listing (excluding South Africa). The Fund price is reported in US dollars, but the underlying holdings are denominated in various currencies. Returns are likely to be volatile.

Classification: Africa ex-SA – Equity

**Fund objective and benchmark**

The Fund aims to outperform African equity markets over the long term without taking on greater risk of loss. The Fund’s benchmark is the Standard Bank Africa Total Return Index. The Fund does not seek to mirror the benchmark but instead may deviate meaningfully from this performance benchmark in pursuit of superior returns. To the extent that its investments differ from those in the benchmark, the Fund faces the risk of underperforming the benchmark. Standard Bank has indicated that they intend to discontinue the current benchmark. In light of this, we will change the Fund’s benchmark to the MSCI Emerging Frontier Markets Africa ex-SA Index. This will be effective from 1 November 2023, subject to regulatory approval.

**African equity markets**

There are numerous risks involved in investing in African equity markets. These risks may be significantly higher than in more developed markets and may include (but are not limited to) the following:

- Individual countries may impose capital controls preventing the repatriation of foreign currency
- Returns are expected to be more volatile, and the average drawdown may be higher, than in more developed markets
- Low liquidity whereby subscriptions into the Fund may have to be phased in, and redemptions from the Fund may be limited per dealing day
- Market prices may not accurately reflect the fair value of a Fund asset and fair value pricing may be used

There is no assurance that the investment approach of the Fund will be successful or that the Fund will achieve its investment objective.

See the “Important information for investors” section for more information.

**How we aim to achieve the Fund’s objective**

We invest in shares that we believe offer superior fundamental value while taking into account risk and return. We research companies and assess their intrinsic value based on long-term fundamentals; we then invest in businesses where our assessment of intrinsic value exceeds the share price by a margin of safety. This approach allows us to identify shares that may be out of favour with the market because of poor near-term prospects, but offer good value over the long term. The Fund’s holdings will deviate meaningfully from those in the index both in terms of individual holdings and sector exposure.

**Suitable for those investors who**

- Seek exposure to African (excluding South African) equities
- Are comfortable with above-average stock market and currency fluctuations
- Are prepared to take on the risk of capital loss
- Have a minimum investment horizon of five years

**Fund information on 31 August 2023**

Fund currency	US\$
Fund size	US\$406m
Number of shares	2 509 214
Price (net asset value per share)	US\$141.90
Number of share holdings	45
Dealing day	Weekly (Thursday)
Class	C
Class inception date	14 May 2020

**Minimum investment amounts**

Minimum initial investment	US\$50 000
Minimum subsequent investment	US\$1 000

1. Prior to the inception of this class of the Fund, the performance and risk measures are calculated using the A class performance of the Fund.
2. Standard Bank Africa Total Return Index (source: Standard Bank), performance as calculated by Allan Gray as at 31 August 2023. Calculation based on the latest available data as supplied by third parties. The Index has been restated for the months of October 2020 to July 2023.
3. Maximum percentage decline over any period calculated from monthly returns. The maximum drawdown occurred from August 2014 to July 2016 and maximum benchmark drawdown occurred from July 2014 to March 2020. Drawdown is calculated on the total return of the Fund/benchmark (i.e. including income).
4. The percentage of calendar months in which the Fund produced a positive monthly return since inception.
5. The standard deviation of the Fund’s monthly return. This is a measure of how much an investment’s return varies from its average over time.
6. This is the highest or lowest rolling 12-month return the Fund has experienced since inception. The Fund’s highest annual return occurred during the 12 months ended 31 January 2018 and the benchmark’s occurred during the 12 months ended 31 March 2021. The Fund’s lowest annual return occurred during the 12 months ended 31 August 2015 and the benchmark’s occurred during the 12 months ended 31 August 2015. All rolling 12-month figures for the Fund and the benchmark are available from the Allan Gray Service Team on request.
7. The relative to benchmark return required has not yet been adjusted to reflect the understatement of the Standard Bank Africa Total Return Index since October 2020. Once any required corrective action has been taken, it will be updated accordingly.

**Performance in US\$ net of all fees and expenses**

Value of US\$10 invested at inception with all distributions reinvested

% Returns	Fund <sup>1</sup>	Benchmark <sup>2</sup>
<b>Cumulative:</b>		
Since inception (1 January 2012)	52.1	11.3
<b>Annualised:</b>		
Since inception (1 January 2012)	3.7	0.9
Latest 10 years	0.5	0.3
Latest 5 years	0.1	6.7
Latest 3 years	10.7	7.6
Latest 2 years	-5.4	-1.9
Latest 1 year	5.4	4.1
Year-to-date (not annualised)	0.9	-3.7
<b>Risk measures (since inception, based on month-end prices)</b>		
Maximum drawdown <sup>3</sup>	-51.7	-54.4
Percentage positive months <sup>4</sup>	55.0	50.7
Annualised monthly volatility <sup>5</sup>	18.7	19.4
Highest annual return <sup>6</sup>	69.1	71.9
Lowest annual return <sup>6</sup>	-38.6	-43.4

Relative to benchmark return required to reach high watermark: 20.5%<sup>7</sup>.

**Meeting the Fund objective**

The Fund aims to outperform African equity markets (excluding South Africa) over the long term without taking on greater risk of loss. The Fund experiences periods of underperformance in pursuit of this objective. Since inception, the Fund has outperformed its benchmark by a significant margin. The maximum drawdown and lowest annual return numbers in the "Performance in US\$ net of all fees and expenses" table show that the Fund has not experienced more downside than its benchmark in periods of negative market returns. We believe our philosophy of buying undervalued equities should generate positive absolute returns over time.

**Subscription and redemption charge**

Investors may be charged 1% when subscribing for Fund shares. Investors may be charged 1% when redeeming Fund shares in the case of significant redemptions. These charges are paid into the Fund to offset the costs associated with the transactions that are borne by the Fund. Allan Gray Bermuda Limited (the "Investment Manager") may waive these charges if transactions substantially offset one another.

**Annual management fee**

The management fee consists of a base fee of 0.7% and a performance component. The fee rate is calculated weekly by comparing the Fund's total performance for the week, after the base fee is deducted, to that of the benchmark.

**Fee for performance equal to the Fund's benchmark:** 0.70% p.a.

For each percentage point above or below the benchmark we add or deduct 0.2%. This means that Allan Gray shares in approximately 20% of the performance relative to the benchmark.

The fee is capped at 4.7% over any 12-month rolling period and can decrease to a minimum of 0%. If the fee would have been negative, the negative fee will be carried forward to reduce the next week's fee (and all subsequent weeks until the underperformance is recovered).

**Total expense ratio (TER) and transaction costs**

The annual management fee charged is included in the TER. The TER is a measure of the actual expenses incurred by the Fund over a one- and three-year period (annualised). Since Fund returns are quoted after deduction of these expenses, the TER should not be deducted from the published returns (refer to page 4 for further information). Transaction costs are disclosed separately. The TER and transaction costs cannot be determined accurately because of the short life span of the class. Calculations are based on actual data where possible and best estimates where actual data is not available.

**Country of primary listing on 31 August 2023<sup>8</sup>**

Country	% of Equities	Benchmark <sup>2</sup>
Nigeria	34.0	15.7
Zimbabwe	13.8	0.0
Egypt	12.4	17.4
BRVM	8.3	2.0
Australia	7.8	8.3
Kenya	6.9	10.7
United Kingdom	6.5	9.8
Uganda	4.4	0.0
Malawi	1.9	0.0
Rwanda	1.7	0.0
Canada	0.7	15.4
Norway	0.7	0.0
Tanzania	0.5	0.0
Ghana	0.3	0.0
Zambia	0.1	0.0
Morocco	0.0	7.3
USA	0.0	6.4
Mauritius	0.0	3.9
Tunisia	0.0	3.2
<b>Total (%)<sup>9</sup></b>	<b>100.0</b>	<b>100.0</b>

8. The primary listing may not represent the geographical location of the company's operations. The fund invests based on the primary place of operation, not listing.

9. There may be slight discrepancies in the totals due to rounding.

10. Prior to the inception of this class of the Fund, the TER and Transaction costs data is that of the A Class of the Fund, reduced by 0.3% p.a.

11. The TER reflected in the table overstates the performance fee that should have been levied on the Fund, due to the understatement of the Standard Bank Africa Total Return Index since October 2020.

We are in the process of investigating the impact of the error on the fees levied. Once any corrective action required has been taken, the TER will be restated accordingly.

**Sector allocation on 31 August 2023**

Sector	% of Fund	Benchmark <sup>2</sup>
Energy	10.5	11.6
Basic materials	13.0	29.3

<b>Transaction costs</b>	<b>0.09</b>	<b>0.15</b>
<b>Total investment charge</b>	<b>0.51</b>	<b>0.84</b>

The Fund returned 1.1% for the first six months of 2023, compared to the benchmark's -4.3%\*. These figures hide what has been a disappointing second quarter. By way of comparison, the S&P 500 returned 17%, and the MSCI World Index returned 15% during the same period. Broadly speaking, African markets have lagged with the MSCI Nigeria Index returning -20%, the MSCI Egypt Index returning 0.2% and the MSCI Kenya Index -28%.

Nigeria's new president, Bola Tinubu, has certainly turned some heads since his inauguration on 29 May 2023. It has taken him mere weeks to implement certain economic reforms that the market has been hopeful about for years. His actions are in stark contrast to those of his predecessor, Muhammadu Buhari, who earned the nickname "Baba Go Slow". After removing the very costly fuel subsidy shortly after taking office, he suspended the central bank governor and took steps to remove the restrictions on the foreign exchange market, including the unification of Nigeria's various exchange rates. Expectedly, this introduced volatility to the naira-US dollar exchange rate, which closed the month at 757. On the back of these changes, Nigerian equities have rallied in local currency terms but not enough to close the gap with the weaker exchange rate. This has been a headwind to the Fund's performance over the quarter.

We expect that it will take some time for the naira to settle as there are still question marks around certain mechanics of the foreign exchange market (e.g. the backlog of unmet demand). Stability will also hinge on the implementation of coherent monetary and fiscal policies. What we are more confident about is that the reforms and more orthodox economic policies, if they prove sticky, would be fundamentally positive for the Nigerian companies and should translate into decent shareholder performance.

Our largest Nigerian exposure remains to Seplat Energy, which we hold through both the London and Nigerian listings. Positively, they recently announced an extension of the timeline to complete their deal to acquire ExxonMobil's Nigerian offshore shallow water business, subject to regulatory approvals. Essentially, the deal will now be for President Tinubu to approve. Despite attaching no value to the transaction, we continue to find Seplat attractive at the spot valuation.

During the quarter, we added to our positions in Guaranty Trust Holding Company (GTCO) and Stanbic IBTC. We funded these trades with naira dividends received and the sale of Access Corporation. Aside from their attractive valuations, both businesses have lower asset quality risks, robust capital positions and are run by strong management teams who we think have done a commendable job in navigating the unorthodoxy in the industry. These are important traits for navigating what could prove to be a tricky transition to orthodoxy in Nigeria.

Our Zimbabwean equities have also been a headwind to this quarter's performance. The Reserve Bank of Zimbabwe has allowed the Zimbabwean dollar (ZWL) to devalue sharply since early May in a bid to close the gap between the official and parallel exchange rates. Concurrently, they are trying to improve the functioning of the interbank foreign exchange market and widen participation on a willing-buyer, willing-seller basis. Fundamentally, these are positive moves. From a market perspective, as in Nigeria, shares listed on the Zimbabwe Stock Exchange (ZSE) have rallied, but the rally has failed to keep pace with the movement of the official ZWL-US dollar exchange rate. For context, so far this year, the ZWL has lost approximately 90% of its value against the US dollar. We continue to value our ZSE holdings at the lower of the market price using the official exchange rate or our conservative estimate of each stock's fair value. These holdings (Delta, Econet and EcoCash) are currently valued at market prices – a change from fair values at the end of the previous quarter.

Kenya is experiencing a balance of payments crisis and shortages in the foreign exchange market. The Kenyan shilling has depreciated to record lows against the US dollar, which has been a headwind to performance. This year, Safaricom, which was historically the market darling, has returned -34% on a total return basis in US dollars. We do not hold Safaricom in the Fund. We have limited exposure to Kenya in the likes of Stanbic Holdings and British American Tobacco, both of which have delivered positive US dollar total returns over the past three years.

**Fund manager quarterly  
commentary as at  
30 June 2023**

\* **Standard Bank Africa Total Return Index restated, effective 31 August 2023**

The Fund's benchmark has been the Standard Bank Africa Total Return Index ("the Index") since the Fund's inception on 1 January 2012. It has come to our attention that since October 2020, due to internal process failures at Standard Bank, the Index has not been maintained according to its published index rules. The error has resulted in the benchmark's performance over the period 1 October 2020 to 31 July 2023 being understated by 3.0% per annum. As the Fund's investment management fee is charged based on the extent to which the Fund out- or underperforms its benchmark, the investment management fee that was levied in the Fund on certain dates over this period was overstated.

Standard Bank have restated the historical Index so that it is consistent with their original rules. The corrected Index performance is shown on page one and the commentary above has been updated to reflect the restatement. We are in the process of investigating the impact on the Fund's investors and any corrective action required. We will communicate the details to all impacted investors.

While the Fund has been approved to market its shares to the public in Botswana by the Regulatory Authority of Botswana, the undertaking is not supervised or licensed in Botswana. The Fund is incorporated and registered under the laws of Bermuda and is supervised by the Bermuda Monetary Authority. The Fund's share classes are also listed on the Bermuda Stock Exchange. The primary custodian of the Fund is Citibank N.A., New York Offices. The custodian can be contacted at 390 Greenwich Street, New York, New York, 10012, USA. Allan Gray Bermuda Limited (the "Investment Manager") has appointed Allan Gray Unit Trust Management (RF) Proprietary Limited (the "Representative") as its representative for the purpose of approval in terms of the Collective Investment Schemes Control Act 45 of 2002. The Representative is incorporated under the laws of South Africa and is supervised by the Financial Sector Conduct Authority (FSCA). The Fund may be closed to new investments at any time to be managed according to its mandate. Shares in the Fund are traded at ruling prices and the Fund can engage in borrowing and scrip lending. The Fund may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. Investments in the Fund are made according to the terms and conditions and subject to the restrictions set out in the prospectus. The offering of shares in the Fund may be restricted in certain jurisdictions. Please contact the Allan Gray service team to confirm if there are any restrictions that apply to you. Class C shares are only available to certain eligible investors who are subject to an additional administration fee separately agreed with an Allan Gray Group entity.

**Performance**

Collective investment schemes (unit trusts or funds) are generally medium- to long-term investments. Where annualised performance is mentioned, this refers to the average return per year over the period. The value of shares or the investment may go down as well as up and past performance is not necessarily a guide to future performance. Movements in exchange rates may cause the value of underlying international investments to go up or down. Neither the Investment Manager, the Fund nor the Representative provides any guarantee regarding the capital or the performance of the Fund. Performance figures are provided by the Investment Manager and are for lump sum investments with income distributions reinvested. The performance graph is for illustrative purposes only. Actual investor performance may differ as a result of the investment date, the date of reinvestment and applicable taxes.

**Benchmark data**

The Fund's benchmark data is provided by Standard Bank Plc who requires that we include the following legal note. The Standard Bank Africa Total Return Index is the proprietary information and registered trademark of Standard Bank Plc. All copyright subsisting in the Standard Bank Africa Total Return Index values and constituent lists vests in Standard Bank Plc. All their rights are reserved.

**Share price**

Share prices are calculated on a net asset value basis, which is the total market value of all assets in the Fund, including any income accruals and less any permissible deductions from the Fund divided by the number of shares in issue. Forward pricing is used. The weekly price of the Fund is normally calculated each Friday. Purchase requests must be received by the Registrar of the Fund by 17:00 South African time on that dealing day to receive that week's price. Redemption requests must be received by the Registrar of the Fund by 17:00 South African time on the particular dealing day on which shares are to be redeemed to receive that week's price. Share prices are available on [www.allangray.co.za](http://www.allangray.co.za).

**Fees and charges**

Permissible deductions from the Fund may include management fees, brokerage, securities transfer tax, auditor's fees, bank charges and custody fees. A schedule of fees, charges and maximum commissions is available on request from the Representative.

**Total expense ratio (TER) and transaction costs**

The TER is the annualised percentage of the Fund's average assets under management that has been used to pay the Fund's actual expenses over the past one- and three-year periods. The TER

includes the annual management fees that have been charged (both the fee at benchmark and any performance component charged) and other expenses like audit fees. Transaction costs (including brokerage, securities transfer tax and investor protection levies where applicable) are shown separately. Transaction costs are necessary costs in administering the Fund and impact Fund returns. They should not be considered in isolation as returns may be impacted by many other factors over time, including market returns, the type of fund, the investment decisions of the Investment Manager and the TER. Since Fund returns are quoted after the deduction of these expenses, the TER and transaction costs should not be deducted again from published returns. As collective investment scheme expenses vary, the current TER cannot be used as an indication of future TERs. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. Instead, when investing, the investment objective of the Fund should be aligned with the investor's objective and compared against the performance of the Fund. The TER and other funds' TERs should then be used to evaluate whether the Fund performance offers value for money. The sum of the TER and transaction costs is shown as the total investment charge (TIC).

**African markets**

There are significant risks involved in investing in shares listed in the Fund's universe of emerging and developing countries, including liquidity risks, sometimes aggravated by rapid and large outflows of "hot money" and capital flight, concentration risk, currency risks, political and social instability, the possibility of expropriation, confiscatory taxation or nationalisation of assets and the establishment of foreign exchange controls which may include the suspension of the ability to transfer currency from a given country. African countries have varying laws and regulations and, in some, foreign investment is controlled or restricted in varying degrees.

**Capacity**

The Fund currently has limited capacity. The Investment Manager may, at its discretion, refuse a subscription or phase a subscription into the Fund over a number of dealing days. Total investor redemptions may be limited to US\$5m or 2.5% of the Fund (whichever is less) per dealing day. The Investment Manager retains the right to distribute all or part of any redemption proceeds in specie (in kind).

**Fair value pricing**

The board of directors of the Fund (the "Board") may fair value the Fund's assets in accordance with the Board's fair value pricing policies if: 1) the closing market quotations or official closing prices are not readily available or do not accurately reflect the fair value of a Fund asset; or 2) the value of a Fund asset has been materially affected by events occurring before the Fund's pricing time but after the close of the exchange or market on which the asset is principally traded. The Board delegates the responsibility for fair value pricing decisions to a valuation committee of the Investment Manager.

**Contractual risk**

The Fund can use derivatives to manage its exposure to stock markets, currencies and/or interest rates and this exposes the Fund to contractual risk. Contractual risk includes the risk that a counterparty will not settle a transaction according to its terms and conditions because of a dispute over the terms of the contract (whether or not bona fide) or because of a credit or liquidity problem, causing the Fund to suffer a loss. Such contract counterparty risk is accentuated for contracts with longer maturities where events may intervene to prevent settlement, or where the Fund has concentrated its transactions with a single or small group of counterparties.

**Derivatives**

Borrowing, leveraging, and trading securities on margin will result in interest charges and, depending on the amount of trading activity, such charges could be substantial. The low margin deposits normally required in futures and forward trading, which the Fund may utilise, permit a high degree of leverage. As a result, a relatively small price movement in a futures or forward contract may result in immediate and substantial losses to the investor. Price movements of forward contracts and other derivative contracts in which the assets of the Fund may be invested are highly volatile and are influenced by, among other things, interest rates, changing supply and demand relationships, trade, fiscal, monetary and exchange control programmes and policies of governments, and national and international political and economic events and policies. Forward contracts are not traded on exchanges and are not standardised; rather, banks and dealers act as principals in these markets, negotiating each transaction on an individual basis. Trading in forward contracts is substantially unregulated and there is no limitation on daily price movements.

**MSCI Index**
