### Commentary

Investing in life insurers in a country with minimal economic growth, a shrinking and ageing population and high penetration rates for life insurance products might seem counterintuitive. Yet your Fund has a 10.4% exposure to two Japanese life insurers, Dai-ichi Mutual Life and T&D Holdings. Both companies currently trade at about 0.5 times embedded value (EV), a rough proxy for intrinsic value. By comparison, European life insurers trade at 0.9 times current EV, while in China they trade at over 2.0 times. What makes these companies even more attractive, however, is that their EV is particularly geared to any sell-off in bonds. Any rise in Japanese government bond yields would cause the EV of these insurers to rise sharply, leaving share prices at even steeper discounts to intrinsic value.
