Commentary

In keeping with our bottom-up stockpicking discipline, we have been seeking to increase exposure to Japanese companies whose share price decline since the 11 March earthquake has been more than what is warranted by any change in our assessment of its intrinsic value. One such company is NTT Urban Development, a major real estate company with a high quality portfolio. With none of its properties suffering direct structural damage, we do not believe there has been a material decline in the intrinsic value of the company, which is underpinned by the value of its real estate. Based on both the company's and our assessment, we believe NTT Urban Development's assets (net of debt) are worth twice its current market capitalisation. The Fund already owned the stock at a steep discount to our assessment of intrinsic value; the near 20% fall in the share price since the earthquake has provided the Fund with an opportunity to increase its exposure.
